EXECUTIVE SUMMARY

Alcoa of Australia Limited's (Alcoa) Western Australian (WA) mining operations comprise the Huntly and Willowdale bauxite mines, which are located in Alcoa's Mining Lease 1SA (ML1SA) within the Northern Jarrah Forest (NJF) IBRA subregion. Alcoa has committed to undertaking pre-clearance ecological surveys for the Huntly Mine, Myara region and Willowdale Mine, Larego region as part its MMP assessment by the MMPLG. These surveys will be based on conceptual clearing alignments which will be submitted as part of the MMP. Ecologia Environment (ecologia) was engaged by Alcoa to undertake targeted flora surveys for the Huntly Mine survey area in 2023, totalling 673.81 ha, which were undertaken over 25 days primarily in spring 2023 (late August and early December).

Based on the proximity of previous records and the potential presence of suitable habitat, 29 conservation significant plant species were assessed as potentially occur within the survey area. Targeted searches for these species, as well as Weeds of National Significance (WONS) and Declared Pests, were conducted along systematic transects at 20 m or 10 m spacings within the survey area.

Three DBCA listed Priority species were recorded within the survey area: *Tetratheca phoenix* (P2), *Senecio leucoglossus* (P4), and *Stylidium ireneae* (P4). The likelihood of occurrence of the remaining species identified during the desktop assessment was reassessed for the surveyed areas based on survey effort, the presence of suitable habitat, and vegetation condition, and all species initially assessed with a 'High' or 'Moderate' likelihood of occurrence were reassessed as 'Low'. There were no WONS or Declared Pests recorded.

1 INTRODUCTION

1.1 PROJECT BACKGROUND

Alcoa of Australia Limited's (Alcoa) Western Australian (WA) mining operations comprise the Huntly and Willowdale bauxite mines, which are located in Alcoa's Mining Lease 1SA (ML1SA) within the Northern Jarrah Forest (NJF) IBRA subregion. Alcoa has approval to mine within ML1SA subject to submitting draft five-year mine plans and associated environmental management programmes known as the Mining and Management Program (MMP). The MMP is submitted to the State's Mining and Management Program Liaison Group (MMPLG) on an annual basis.

Alcoa has committed to undertaking pre-clearance ecological surveys for the Huntly Mine, Myara region and Willowdale Mine, Larego region as part its MMP assessment by the MMPLG. These surveys will be based on conceptual clearing alignments which will be submitted as part of the MMP and will be used to:

- Amend the conceptual alignment to avoid significant flora and vegetation.
- Create management plans to ensure any identified Weeds of National Significance (WONS) or declared and invasive weeds are not spread.
- Inform translocation and environmental management plans as required.
- Assist Alcoa in preparing MMP submission to the MMPLG.

1.2 SCOPE OF WORK

Alcoa required a suitably qualified consultant to undertake targeted surveys for Threatened and Priority Flora and significant weeds species (primarily Weeds of National Significance and Declared Pests) within the Huntly Mine survey area, which, as of December 2023, occupies an area of 673.81 ha (Map 1).

The following were provided as part the biological assessment of the survey area:

- A desktop assessment to evaluate biological values of the survey area and surrounds, relating to significant plants species and weeds.
- Targeted surveys within designated survey areas as per EPA guidance:
 - In 10 or 20 m traverses in a grid pattern to identify Threatened and Priority species presence or absence. If a Threatened or Priority species is found, the survey effort is modified to delineate the impacted population.
 - Other conservation significant flora species will be recorded when identified.
 - Record any WONS, Declared Pests, and invasive weeds.

1.3 DEFINITIONS

1.3.1 Significant Flora

According to the *EPA Factor Guideline: Flora and Vegetation* (EPA 2016a), plant taxa (or records) may be considered significant for reasons including, but not restricted to, the following:

- A taxon listed as Threatened under Western Australia's *Biodiversity Conservation Act 2016* (BC Act) or the Commonwealth's *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act).
- A taxon on the Department of Biodiversity, Conservation and Attractions (DBCA) Priority Flora List.
- Locally endemic species or those associated with a restricted habitat type (e.g. surface water or groundwater dependent ecosystems).
- New species or those having anomalous features that indicate a potential new species.
- Being representative of the range of a species (particularly, at the extremes of range, recently discovered range extensions, or isolated outliers of the main range).
- Unusual species, including restricted subspecies, varieties or naturally occurring hybrids.

- Being representative of taxonomic groups that no longer occur widely in the broader landscape (relictual species/populations).

1.3.2 Introduced Plants

Weeds of National Significance

Under the Australian Weeds Strategy there are 32 introduced plant species listed as Weeds of National Significance (WONS) that are “causing major economic, environmental and/or social impacts in a number of states or territories with strong potential for further spread” (DAWR 2017). These species require “coordinated and strategic management along with shared stakeholder investment to develop and implement best practice to prevent, eradicate, contain and/or minimise [their] impacts in different parts of the nation” (DAWR 2017).

Biosecurity and Agriculture Management Act 2007

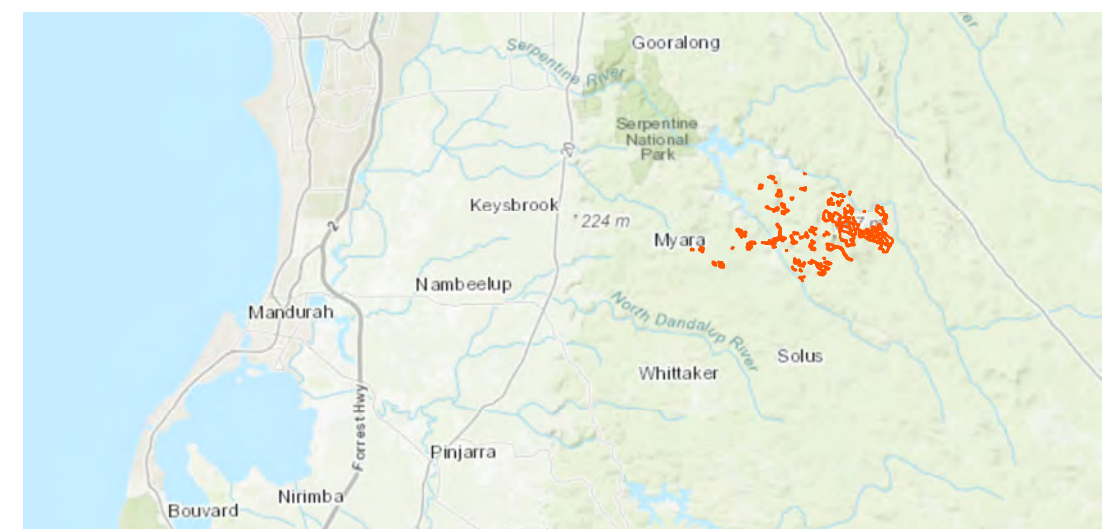

The purpose of Western Australia’s *Biosecurity and Agriculture Management Act 2007* (BAM Act) is to prevent serious animal and plant pests and diseases from entering Western Australia and becoming established, and to minimise the spread and impact of those that are already present. The Western Australian Organism List (WAOL) lists organisms that are categorised under the BAM Act into five legal categories: ‘Declared Pest, Prohibited -s12’, ‘Declared Pest -s22(2)’, ‘Permitted -s11’, ‘Permitted, Requires Permit -r73’, and ‘Unlisted -s14’. A Declared Pest may be subject to control and keeping requirements once within Western Australia.

Regional Weed Prioritisation Process

At a regional level in Western Australia, introduced plant species are ranked using the Weed Prioritisation Process (DPaW 2013). The process is intended to “highlight the species that have the highest ecological impact, most extensive potential distribution, highest invasiveness, lowest current distribution and highest feasibility of control within a regional context based on the information available at the time” (DPaW 2013).

 Survey area

Map 1: Location of the Huntly Mine survey area.

2 DESKTOP ASSESSMENT

2.1 DESKTOP METHODOLOGY

The methodology adopted for the desktop assessment was in accordance with the *Technical Guidance – Flora and Vegetation Surveys for Environmental Impact Assessment* (EPA 2016b) and *Technical Guidance – Terrestrial Vertebrate Fauna Surveys for Environmental Impact Assessment* (EPA 2020). A review of background environmental information for the survey area was undertaken, including, but not limited to, climate (Bureau of Meteorology, BOM), biogeography (IBRA 7) (DSEWPaC 2012), soil-landscape systems (land systems) (DPIRD 2016), the Surface Geology of Australia 1:1M spatial dataset (Geoscience Australia 2012), the Atlas of Australian Soils (Northcote *et al.* 1960-1968), and pre-European native vegetation of Western Australia (Shepherd *et al.* 2002).

Searches of the databases listed in Table 1 were undertaken to determine the significant species and ecological communities previously recorded within 20 km of the survey area. The criteria listed in Table 2 were then applied to determine the likelihood of occurrence of these species and communities within the survey area. Habitat preferences were sourced, where available, from relevant taxonomic literature, FloraBase records (Western Australian Herbarium 1998–), Threatened Species Profiles (SPRATs), or specimen data from the Australasian Virtual Herbarium (AVH) database (CHAH 2017). The presence of potentially suitable habitat within the survey area was determined using broad landforms, soils, and vegetation associations in comparison to cited preferred habitat (if available) for each species.

Table 1: Databases queried for the desktop assessment.

Database	Search details
EPBC Act Protected Matters database	Records of matters of national significance under the EPBC Act within 20 km of the survey area
DBCA Threatened and Priority Ecological Communities Database	Threatened Ecological Communities (TECs) and Priority Ecological Communities (PECs) within 20 km of the survey area
DBCA Threatened and Priority Flora (TPFL) and WAHERB database	Significant plant species records within 20 km of the survey area

Table 2: Criteria used to assess the likelihood of occurrence of significant species and communities.

Rating	Criterion
Recorded	The species/community has been recorded within the survey area previously or during the current survey.
High	The species/community is likely to occur within the survey area as suitable habitat is known to be present and there are existing records very close to the survey area (within 5 km).
Moderate	The species/community possibly occurs within the survey area as there are existing records in the vicinity of the survey area (ca. 6 – 20 km) and suitable habitat is likely to be present; or The species/community possibly occurs within the survey area as there is insufficient information available to exclude the possibility of occurrence.
Low	The species/community is unlikely to occur within the survey area as suitable habitat is not present or is not likely to be present; or Suitable habitat is present within the survey area, but the taxon/community has not been recorded despite reasonable survey effort.
Does not occur	The community is an existing regionally mapped vegetation association (e.g. Shepherd <i>et al.</i> 2002) or land system which does not occur within the survey area; or The species is recognised as being locally extinct or extinct in the wild and does not occur within the survey area.

2.2 CLIMATE

The survey area is in the Jarrah Forest region of Western Australia, which experiences Mediterranean climate with two distinct seasons: a warm to hot dry summer from December to February and a mild to cool wet winter from June to August. Rainfall data from the nearest long-term Bureau of Meteorology (BOM) weather station (since 1963) were obtained from Karnet (Station No. 9111), located approximately 7 km to the west of the survey area. Winter rainfall at Karnet in 2023 was approximately 35% lower than average (Figure 1). Temperature data were also obtained from Karnet (Station No. 9111) (BoM 2023) which is located 7 km to the west of the survey area (Figure 1). Maximum daytime temperature at Karnet is frequently above 30°C between January and February, and minimum temperatures can drop below 7°C between July and August.

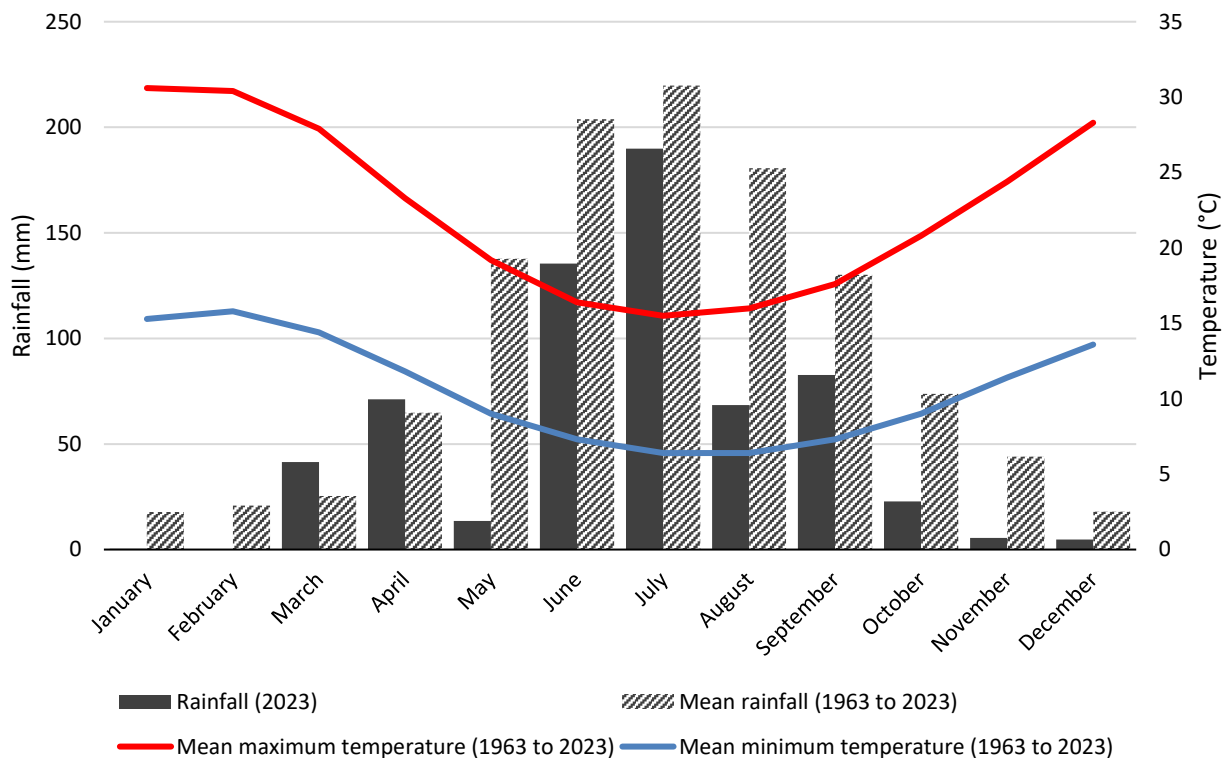

Figure 1: Monthly mean rainfall and temperature for Karnet (rainfall and temperature).

2.3 INTERIM BIOGEOGRAPHIC REGIONALISATION FOR AUSTRALIA

The Interim Biogeographic Regionalisation for Australia (IBRA) classifies the Australian continent into bioregions on the basis of similar geology, landform, vegetation, fauna and climate characteristics (DSEWPaC 2012). The survey area is in the Jarrah Forest bioregion according to IBRA 7. The Jarrah Forest region is further divided into two subregions: Northern Jarrah Forest and Southern Jarrah Forest. The survey area is in the Northern Jarrah Forest subregion.

A description of the Northern Jarrah Forest from *A Biodiversity Audit of Western Australia's 53 Biogeographical Subregions in 2002* (Williams and Mitchell 2001) is as follows:

“The Northern Jarrah Forest incorporates the area east of the Darling Scarp, overlying Archaean granite and metamorphic rocks of an average elevation of 300 m, capped by an extensive lateritic duricrust, dissected by later drainage and broken by occasional granite hills. In the east the laterite becomes deeply dissected until it compresses isolated remnants. Rainfall is from 1300 mm on the scarp to approximately 700 mm in the east and north. Vegetation comprises Jarrah-Marri forest in the west with Bullich and Blackbutt in the valleys grading to Wandoo and Marri woodlands in the east with Powder bark on breakaways. There are extensive but localised sand sheets with *Banksia* low woodlands. Heath is found on granite rocks and as a common understorey of forests and woodlands in the north and east. Most the diversity in the communities occurs on the lower slopes or near granite soils where there are rapid changes in site conditions. Subregional area for JF1 is 2,255,904 ha.”

2.4 LAND SYSTEMS

In 2016 the Department of Primary Industries and Regional Development consolidated soil-landscape mapping of Western Australia from two technical reports created by the Department of Agriculture and Food (Department of Agriculture Resource Management Technical Reports RMTR No. 280 (Purdie *et al.* 2016) and RMTR No. 313 (Tille 2006)). The resulting spatial dataset, *Soil Landscape Mapping - Best Available (Version 05.01)* (DPIRD-027) (DPIRD 2022), is a compilation of various surveys at different scales varying between 1:20,000 and 1:3,000,000. Mapping conforms to a nested hierarchy established to deal with the varying levels of information resulting from the variety of scales in mapping to provide soil-landscape data for all Western Australia. Five soil-landscape units are associated with the survey area (Table 3, Map 2).

2.5 SURFACE GEOLOGY

The Surface Geology of Australia 1:1,000,000 scale spatial dataset is a seamless national coverage of outcrop and surficial geology (Geoscience Australia 2012). Three surface geological units are associated with the survey area (Table 4, Map 3).

2.6 SOILS

The Atlas of Australian Soils (Northcote *et al.* 1960-1968) was compiled by the CSIRO in the 1960's to provide a consistent national description of Australia's soils. The original maps used scales from 1:250,000 to 1:500,000. In 1991 the National Resource Information Centre used these maps to create the Digital Atlas of Australian Soils which describes over 14,000 soil units and their distribution across Australia. Three soil types of the Atlas of Australian Soils are associated with the survey area (Table 5, Map 4).

Table 3: Land systems associated with the survey area (DPIRD-027).

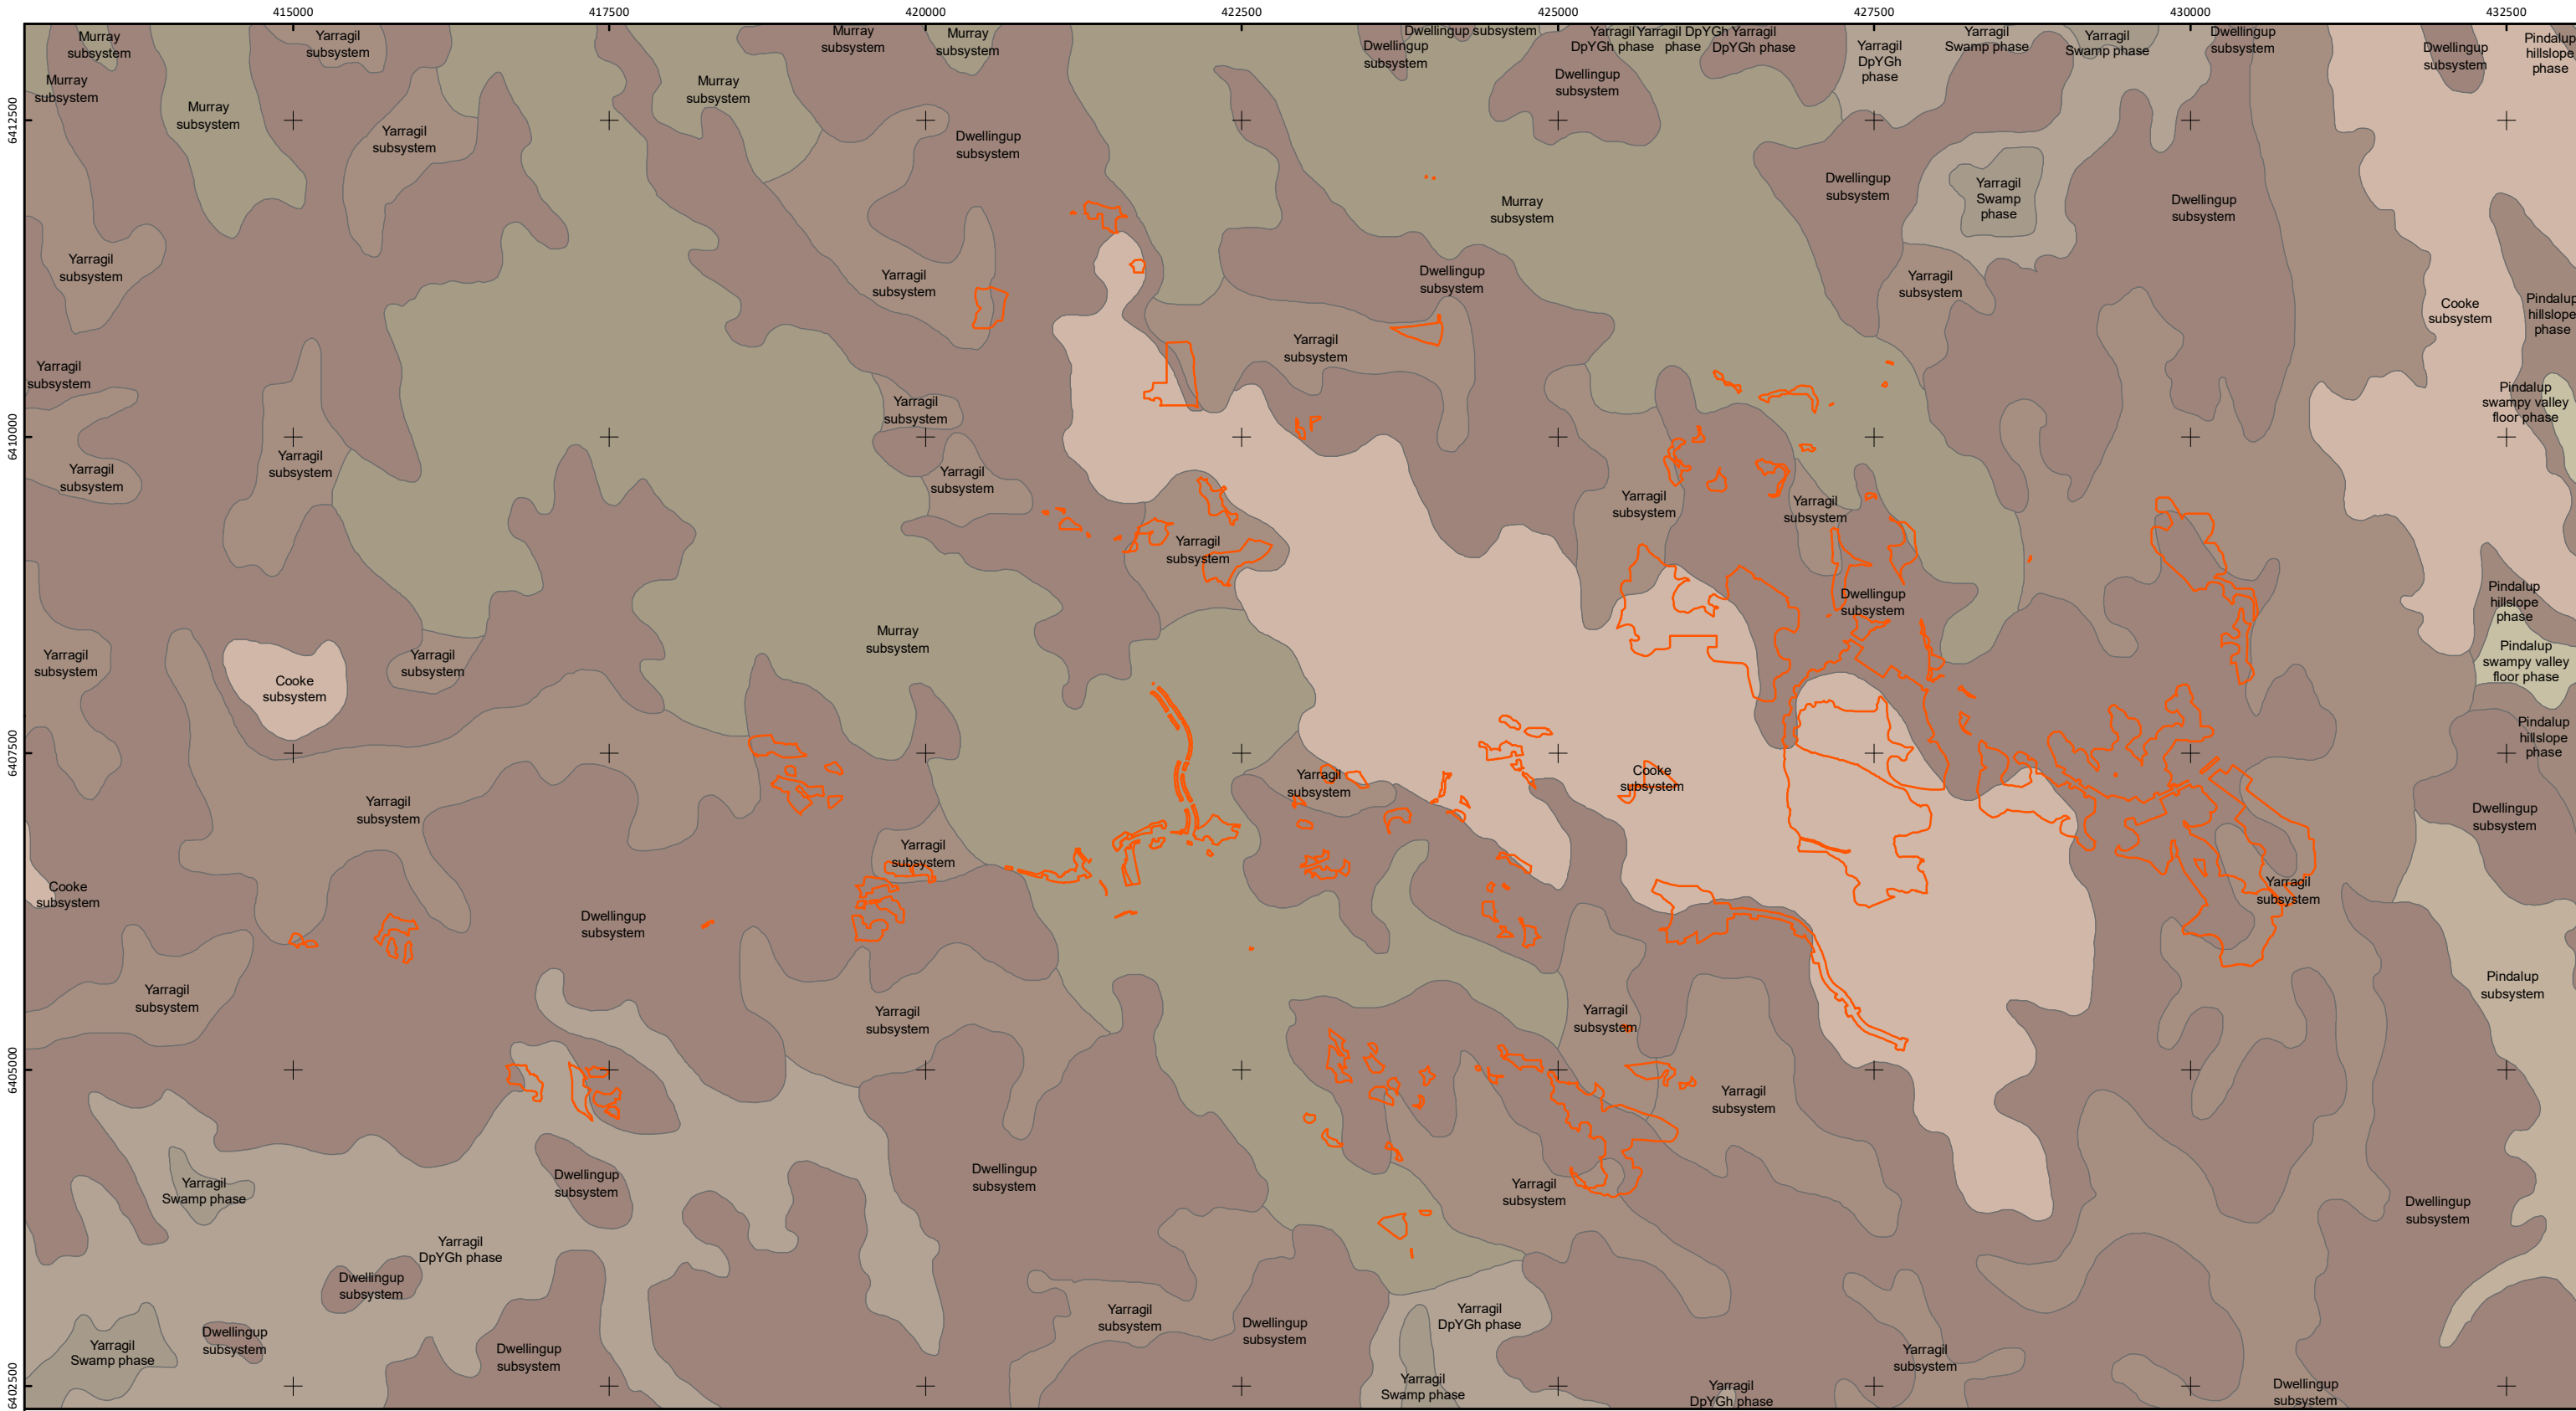

Unit name	Description	Extent within survey area (ha)	Percent of survey area
Cooke subsystem	Crests and upper slopes dominated by granite outcrop and very shallow yellow duplex soils, and yellow and brown massive earths	208.89	31.00
Dwellingup subsystem	Divides, lower to upper slopes and hillcrests. Duplex sandy gravels and loamy gravels with minor areas of shallow gravels, deep sandy gravels, yellow deep sands and yellow and pale deep sands, often gravelly	332.25	49.31
Murray subsystem	Deeply incised valley of the Murray River; red and yellow earths and minor duplex soils; occasional rock outcrops; narrow sandy terrace	26.78	3.97
Yarragil DpYGh phase	Very gentle to moderately inclined (<20%) concave valley sideslopes. Moderately well drained yellow duplex soils and yellow and brown massive earths	6.16	0.91
Yarragil subsystem	Shallow, narrow, upper valleys of the deeply dissected Murray, Bindoon and Helena units. Alluvial, clay and loam soils, moderately well drained, often gravelly, with some sands and loams. Salt prone. Woodland of E. wandoo, E. accedens	99.73	14.81
Total		673.81	100

Table 4: Surface geology associated with the survey area (Geoscience Australia 2012).

Map Symbol	Soil unit	Description	Extent within survey area (ha)	Percent of survey area
Ag	felsic intrusives 74292	Undifferentiated felsic intrusive rocks, including monzogranite, granodiorite, granite, tonalite, quartz monzonite, syenogranite, diorite, monzodiorite, pegmatite. Locally metamorphosed, foliated, gneissic. Local abundant mafic and ultramafic inclusions	415.32	61.64
An	gneiss, granulite, migmatite 74310	Banded granitic gneiss (monzogranitic to granodioritic), quartzofeldspathic gneiss with mafic bands, migmatite, granofels, mafic and felsic granulites, hypersthene-plagioclase-quartz granulite; schist, pelitic or mafic granofels	0.19	0.03
Czl	ferruginous duricrust 38498	Ferruginous duricrust, laterite; pisolitic, nodular, vuggy; may include massive to pisolitic ferruginous subsoil, mottled clays, magnesite, reworked products of ferruginous and siliceous duricrusts, calcrete, gossan; residual ferruginous saprolite	258.3	38.33
Total			673.81	100

Table 5: Atlas of Australian Soil units associated with the survey area (Northcote *et al.* 1960-1968).

Name	Description	Extent within survey area (ha)	Percent of survey area
JJ14	Steep granitic ranges and hills with bare rock walls: chief soils are shallow sands (Uc4.11) and leached sands (Uc2.2) in colluvial positions.	34.6	5.14
JZ1	Dissected plateau having a strongly undulating relief, and with some moderately incised valleys. The unit comprises much of the western part of the Darling Range south of the Swan River. It is characterized by lateritic gravels and block laterite.	634.56	94.17
Mw31	Deeply incised, steep scarp and valley side slopes of the Darling scarp and its more deeply incised tributary valleys: chief soils of the steep scarp and valley side slopes, on which massive rock outcrops are a feature, seem to be acid red earths (Gn2.14) on the colluvial slope deposits.	4.65	0.69
Total		673.81	100

2.7 VEGETATION

2.7.1 Pre-European Vegetation

The Western Australian Land Use and Vegetation Data Project produced a 1:250,000 scale digital spatial dataset of the pre-European native vegetation of Western Australia, compiled from previous vegetation mapping exercises, primarily by J.S. Beard from 1964 to 1981, with updates reflecting the National Vegetation Information System (NVIS) standards (Shepherd et al. 2002). One vegetation association (Association 3, *Eucalyptus marginata*, *Corymbia calophylla*, *Allocasuarina fraseriana* mid open forest) is mapped within the survey area (Table 6, Map 5).

2.7.2 Vegetation mapping of Matiske (2022)

Vegetation for the Myara area was mapped by Matiske (spatial data and descriptions provided by Alcoa in 2023). Twenty-two of these units (including cleared and rehabilitated areas) are present within the survey area (Table 7, Map 6). These consists primarily of *Eucalyptus marginata* and/or *Corymbia calophylla* dominated forests with a variable understorey occurring on steep slopes and plains, accounting for over 90% of the survey area (Table 7).

Two units representing vegetation fringing granite outcrops account for 1.11 ha (0.17%) of the survey area:

- G and G1 (Mosaic of Open Woodland of *Eucalyptus marginata* – *Corymbia calophylla* on the fringes of outcrops ranging to open heath communities of Proteaceae-Myrtaceae species and lithic complexes on the outcrop areas, 1.02 ha, 0.16%)

Two vegetation units accounting for 4.37 ha (0.66% of the survey area) are associated with creeks and water courses:

- CW (Woodland to Open Forest of *Eucalyptus patens* – *Eucalyptus megacarpa* - *Corymbia calophylla* - *Banksia littoralis* with dense *Taxandria linearifolia* and *Astartea scoparia* in understorey on creek-lines and water-courses, 3.23 ha, 0.47%).
- AC (Open Woodland of *Eucalyptus rudis* – *Melaleuca preissiana* – *Eucalyptus patens* - *Banksia littoralis* with dense *Taxandria linearifolia* and *Astartea scoparia* in understorey on broad swamps and water-courses, 1.04 ha, 0.15%).

Note that the provided description of vegetation unit T (Table 7), which accounts for 2.28% of the survey area, appears to be erroneous as the mapped areas are not consistent with creeks or water-courses, and are more likely to represent typical *Eucalyptus marginata* – *Corymbia calophylla* forest or similar.

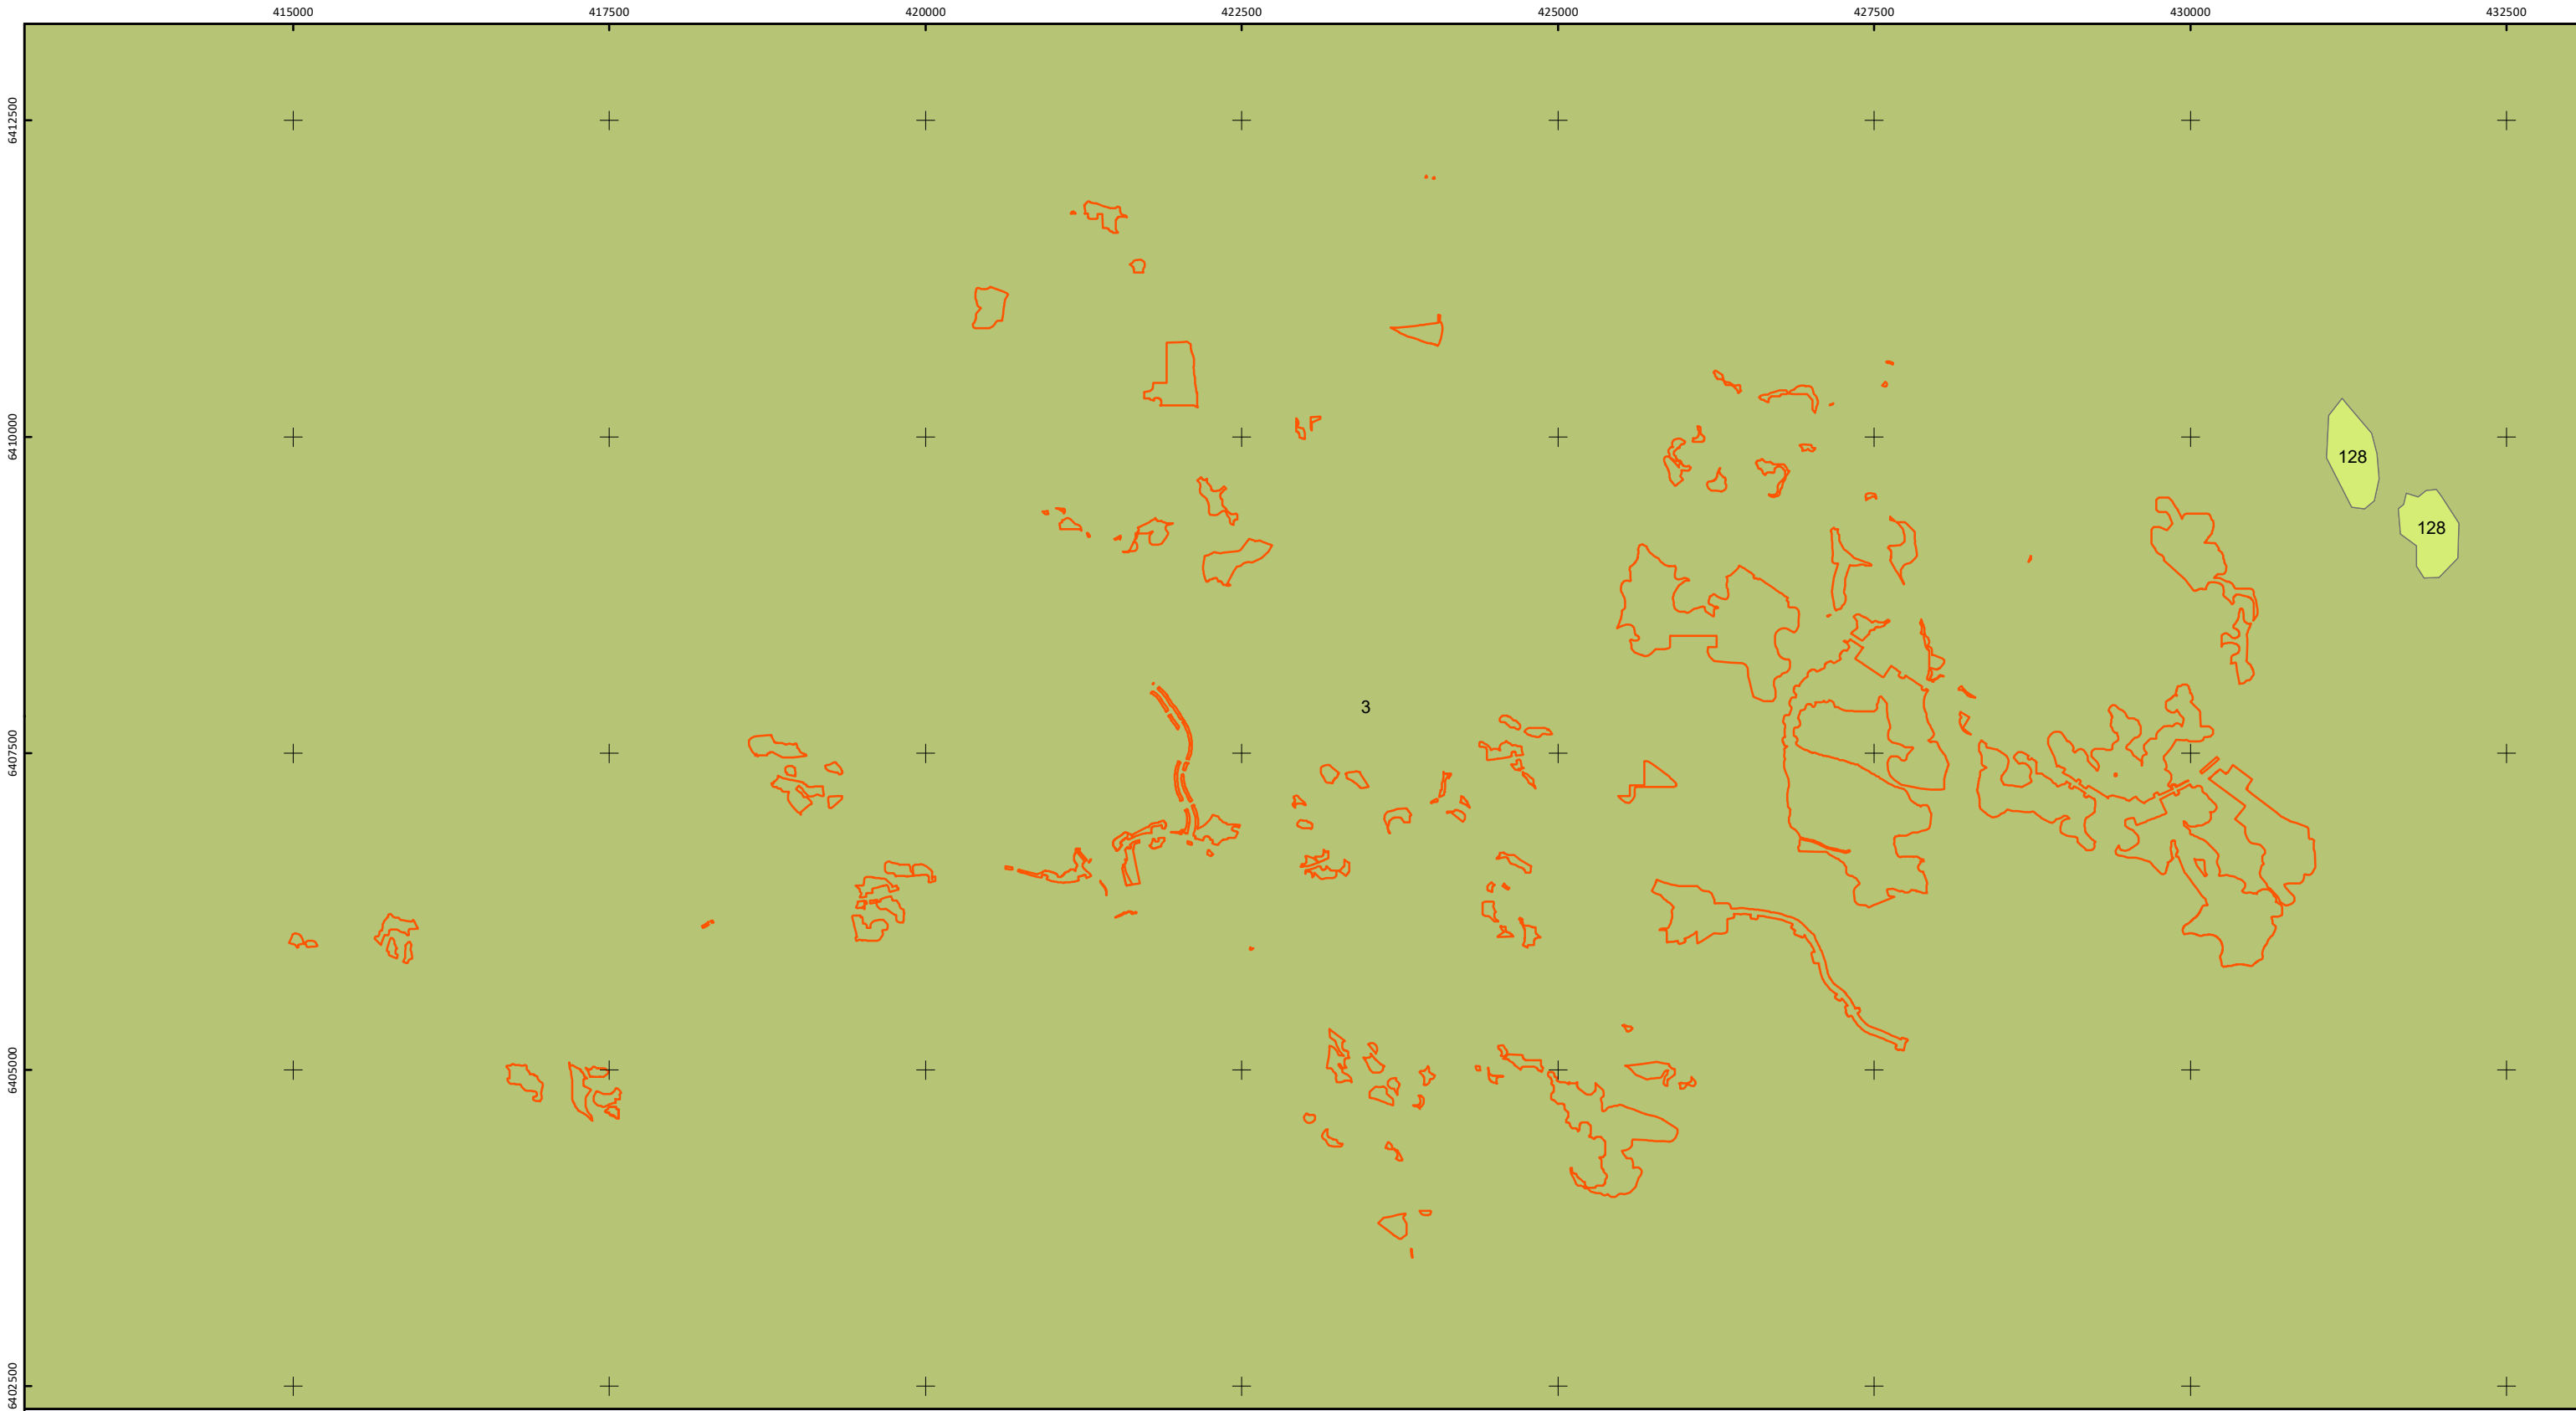

Table 6: Pre-European vegetation associations mapped with the survey area (Shepherd *et al.* 2002).

2.8 FLORA

2.8.1 Significant Species

DBCA database searches identified 58 significant plant taxa within 20 km of the survey area (excluding records from the Swan Coastal Plain), including six Threatened taxa, six Priority 1 taxa, six Priority 2 taxa, 22 Priority 3 taxa, and 18 Priority 4 taxa (Appendix A, Map 7, Map 8).

Based on the proximity of previous records and the potential presence of suitable habitat, 29 taxa were assessed as potentially occurring within the survey area ('High' and 'Moderate' ratings) (Appendix A). Taxa were considered unlikely to occur ('Low' rating) within the survey area if suitable habitat was considered unlikely to be present. These include taxa confined to granite outcrops, of which only 1.02 ha has been mapped within the survey area. Twenty-nine taxa were assessed with a 'Low' likelihood of occurrence (Appendix A).

The optimal targeted search period for most 'High' and 'Moderate' taxa is from approximately August to December, during their cited flowering periods, when they are likely to be most visible. However, while flowering material would be required to confidently identify many of these taxa, non-flowering material is likely to be suitable for identifying material at least tentatively. Therefore, spring surveys (September to November) are preferable for detecting all these species, regardless of flowering period.

2.8.2 Introduced Species

A search of the Atlas of Living Australia database (ALA 2023) identified eighty-five introduced plant species within 20 km of the survey area (Table 8). *Rubus anglocandicans* (part of the *Rubus fruticosus* aggregate) is a Weed of National Significance (WONS) (DAWR 2017). Two species (*Gomphocarpus fruticosus* and *Rubus anglocandicans*) are Declared Pests according to the BAM Act and listed on the WAOL (DPIRD 2007–). Six species have high ecological impact rating and rapid invasiveness rating according to the Weed Prioritisation Process for the region (*Avena barbata*, *Bromus diandrus*, *Bromus hordeaceus*, *Centranthus macrosiphon*, *Chamaecytisus palmensis*, and *Pittosporum undulatum*).

Table 8: Introduced plant species recorded within 20 km of the survey area including BAM Act status and Weed Prioritisation Process rating.

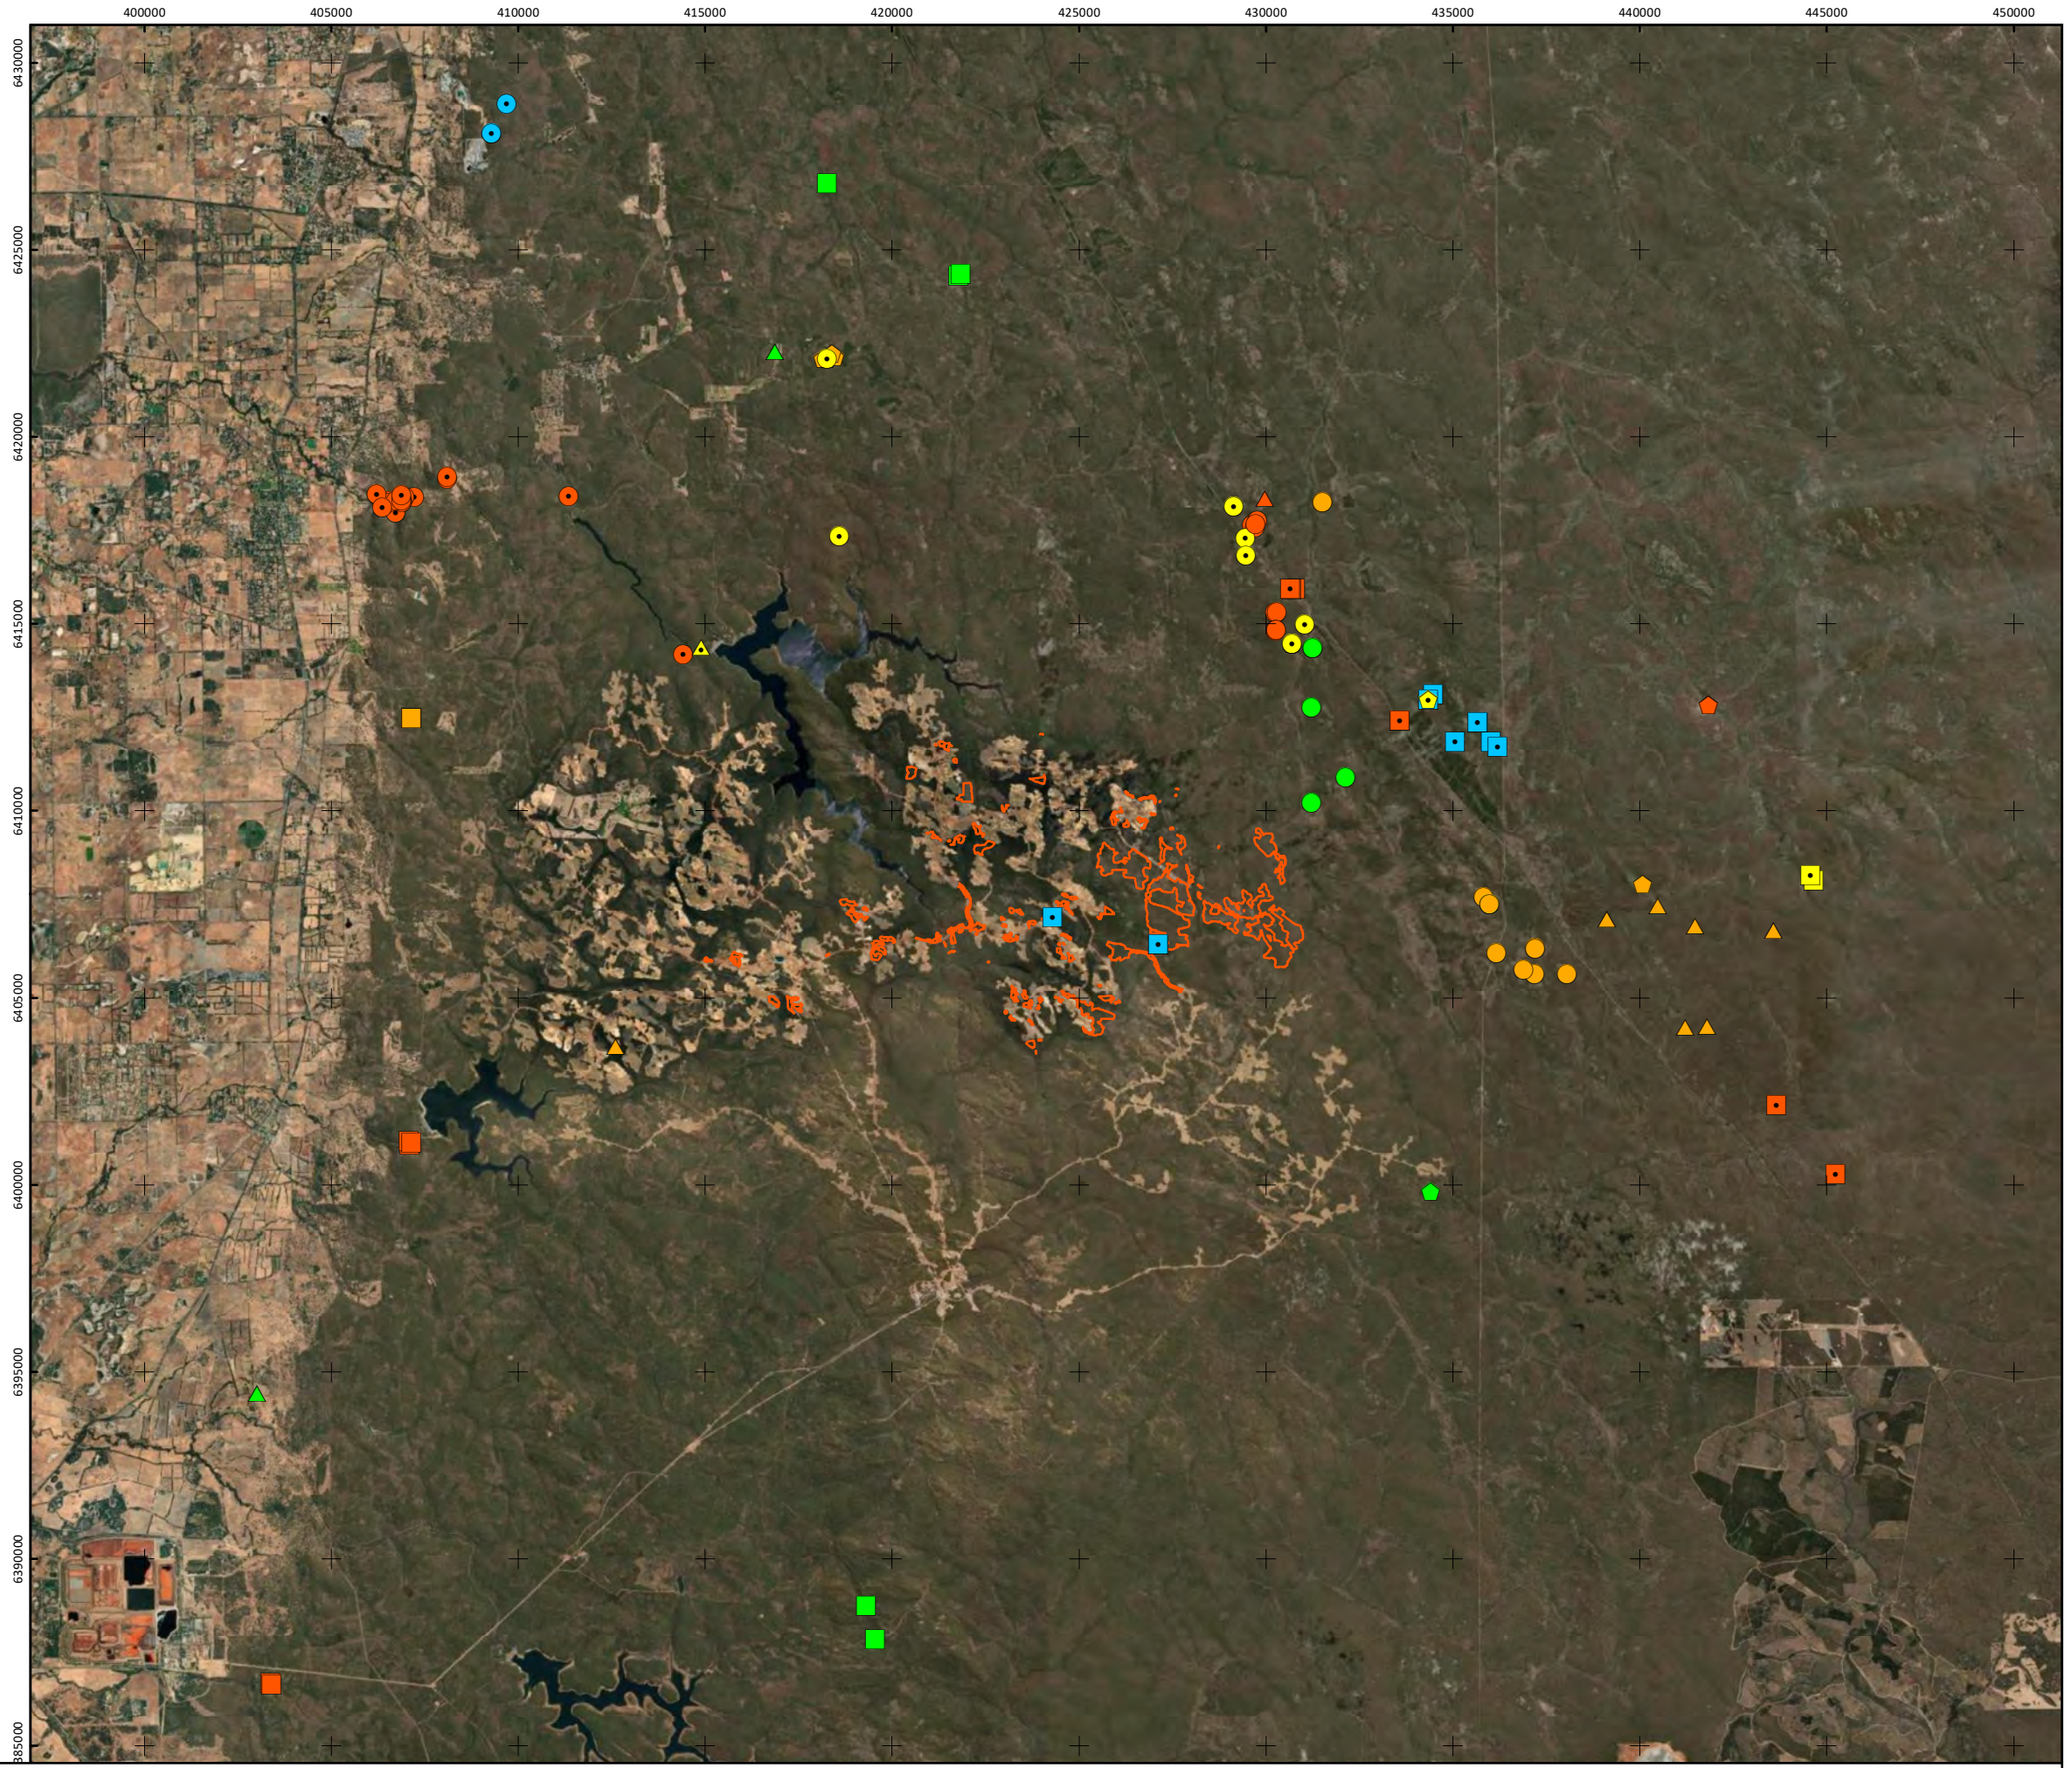

Species	Common name	BAM Act status and WONS	Ecological impact	Invasiveness
<i>Acacia baileyana</i>	Cootamundra wattle	Permitted - s11	Low	Slow
<i>Acacia decurrens</i>	Black wattle	Permitted - s11	Low	Slow
<i>Acacia iteaphylla</i>	Flinders range wattle	Permitted - s11	Unknown	Rapid
<i>Acacia longifolia</i>	Sydney golden wattle	Permitted - s11	Unknown	Moderate
<i>Acacia podalyriifolia</i>	Queensland silver wattle	Permitted - s11	Low	Slow
<i>Acaena echinata</i>	Sheep's burr	Permitted - s11	Unknown	Unknown
<i>Aira caryophyllea</i>	Silvery hairgrass	Permitted - s11	Unknown	Rapid
<i>Aira cupaniana</i>	Hairgrass	Permitted - s11	Unknown	Rapid
<i>Allium neapolitanum</i>	Naples onion	Permitted - s11	Unknown	Unknown
<i>Arctotheca calendula</i>	Capeweed, cape weed	Permitted - s11	Moderate	Moderate
<i>Aristida ramosa</i>	Purple wiregrass	Permitted - s11	Unknown	Unknown
<i>Avena barbata</i>	Bearded oat	Permitted - s11	High	Rapid
<i>Bellardia trixago</i>	Bartsia	Permitted - s11	Unknown	Rapid
<i>Bellardia viscosa</i>	Yellow glandweed	Permitted - s11	Unknown	Unknown
<i>Brachypodium distachyon</i>	False brome	Permitted - s11	Unknown	Unknown
<i>Briza maxima</i>	Blowfly grass	Permitted - s11	Unknown	Rapid
<i>Briza minor</i>	Shivery grass	Permitted - s11	Unknown	Unknown
<i>Bromus diandrus</i>	Great brome	Permitted - s11	High	Rapid
<i>Bromus hordeaceus</i>	Soft brome	Permitted - s11	High	Rapid
<i>Buddleja madagascariensis</i>	Smokebush or Madagascan butterfly bush	Permitted - s11	Unknown	Unknown
<i>Cannabis sativa</i>	Hemp	Permitted, Requires Permit - r73	Unknown	Unknown
<i>Centaureum erythraea</i>	Centauray, common centauray	Permitted - s11	Unknown	Rapid
<i>Centranthus macrosiphon</i>	Pretty Betsy	Permitted - s11	High	Rapid
<i>Chamaecytisus palmensis</i>	Tree lucerne, tagasaste	Permitted - s11	High	Rapid
<i>Chasmanthe floribunda</i>	African cornflag	Permitted - s11	High	Slow
<i>Cicendia filiformis</i>	Cicendia, slender cicendia	Permitted - s11	Low	Rapid
<i>Cotula coronopifolia</i>	Waterbuttons	Permitted - s11	Unknown	Rapid
<i>Cotula turbinata</i>	Funnel weed	Permitted - s11	Unknown	Rapid
<i>Cyathea cooperi</i>	Rough tree fern	Permitted - s11	Moderate	Rapid
<i>Cyperus brevifolius</i>	Mullumbimby couch, kyllinga weed	Permitted - s11	High	Moderate
<i>Cyperus tenellus</i>	Tiny flat sedge, tiny flatsedge	Permitted - s11	Unknown	Rapid
<i>Digitaria sanguinalis</i>	Crabgrass, crab grass	Permitted - s11	Low	Rapid
<i>Disa bracteata</i>	South African orchid	Permitted - s11	Unknown	Rapid
<i>Ehrharta longiflora</i>	Annual veldtgrass, annual veldt grass	Permitted - s11	Unknown	Rapid
<i>Erigeron sumatrensis</i>	Tall fleabane	Permitted - s11	Unknown	Unknown
<i>Fumaria capreolata</i>	Climbing fumitory, whiteflower fumitory	Permitted - s11	Moderate	Unknown
<i>Galium divaricatum</i>	Slender goosegrass	Permitted - s11	Low	Unknown

Species	Common name	BAM Act status and WONS	Ecological impact	Invasiveness
<i>Gladiolus caryophyllaceus</i>	Pink gladiolus	Permitted - s11	Unknown	Unknown
<i>Glyceria declinata</i>	Sweetgrass	Permitted - s11	Moderate	Rapid
<i>Gomphocarpus fruticosus</i>	Swan plant, narrowleaf cottonbush	Declared Pest - s22(2)	Unknown	Rapid
<i>Gomphocarpus physocarpus</i>	Balloon cottonbush	Permitted - s11	Unknown	Rapid
<i>Hedera helix</i>	Ivy	Permitted - s11	Low	Slow
<i>Hypochaeris glabra</i>	Flatweed, smooth catsear	Permitted - s11	Moderate	Rapid
<i>Ixia polystachya</i>	Variable ixia	Permitted - s11	Low	Moderate
<i>Jacaranda mimosifolia</i>	Blue jacaranda	Permitted - s11	Unknown	Unknown
<i>Juncus articulatus</i>	Jointed rush	Permitted - s11	Unknown	Unknown
<i>Juncus bufonius</i>	Toadrush, toad rush	Permitted - s11	Low	Rapid
<i>Juncus capitatus</i>	Capitate rush	Permitted - s11	Low	Rapid
<i>Juncus microcephalus</i>	Weedy rush	Permitted - s11	Low	Rapid
<i>Lagurus ovatus</i>	Hare's tail grass	Permitted - s11	Unknown	Moderate
<i>Lathyrus tingitanus</i>	Tangier pea	Permitted - s11	Low	Slow
<i>Linum trigynum</i>	French flax	Permitted - s11	Low	Unknown
<i>Lolium perenne</i>	Ryegrass	Permitted - s11	Moderate	Rapid
<i>Lonicera japonica</i>	Japanese honeysuckle	Permitted - s11	Unknown	Slow
<i>Lotus angustissimus</i>	Slender birdsfoot trefoil, narrowleaf trefoil	Permitted - s11	Unknown	Rapid
<i>Lotus subbiflorus</i>	Hairy birdsfoot trefoil	Permitted - s11	Unknown	Rapid
<i>Lysimachia arvensis</i>	Scarlet pimpernel, blue pimpernel	Permitted - s11	Unknown	Rapid
<i>Moenchia erecta</i>	Erect chickweed	Permitted - s11	Unknown	Unknown
<i>Orobanche minor</i>	Broom rape, lesser broomrape	Permitted - s11	Unknown	Rapid
<i>Parentucellia latifolia</i>	Red bartsia, common bartsia	Permitted - s11	Unknown	Rapid
<i>Passiflora filamentosa</i>	Passionflower	Permitted - s11	Low	Slow
<i>Pentameris airoides</i>	False hairgrass	Permitted - s11	Unknown	Unknown
<i>Pittosporum undulatum</i>	Sweet pittosporum	Permitted - s11	High	Rapid
<i>Populus alba</i>	White poplar	Permitted - s11	High	Slow
<i>Prunus cerasifera</i>	Cherry plum	Permitted - s11	Low	Slow
<i>Romulea rosea</i>	Guildford grass	Permitted - s11	High	Unknown
<i>Rubus anglocandicans</i>	European blackberry	Declared Pest - s22(2) (WONS)	High	Moderate
<i>Rubus x loganobaccus</i>	Loganberry	Permitted - s11	High	Moderate
<i>Rumex acetosella</i>	Red sorrel	Permitted - s11	Unknown	Unknown
<i>Senecio diaschides</i>	Shingle fireweed	Permitted - s11	Unknown	Unknown
<i>Sonchus oleraceus</i>	Common sowthistle	Permitted - s11	Moderate	Rapid
<i>Symphyotrichum squamatum</i>	Bushy starwort	Permitted - s11	Unknown	Rapid
<i>Tolpis barbata</i>	Tolpis, yellow hawkweed	Permitted - s11	Unknown	Rapid
<i>Tribulus terrestris</i>	Bindii	Permitted - s11	Unknown	Unknown
<i>Trifolium campestre</i>	Hop trefoil	Permitted - s11	Unknown	Unknown

Species	Common name	BAM Act status and WONS	Ecological impact	Invasiveness
<i>Trifolium dubium</i>	Suckling clover	Permitted - s11	Unknown	Unknown
<i>Trifolium hirtum</i>	Rose clover	Permitted - s11	Unknown	Unknown
<i>Trifolium ligusticum</i>	Ligurian clover	Permitted - s11	Unknown	Unknown
<i>Tritonia gladiolaris</i>	Tritonia, lined tritonia	Permitted - s11	Unknown	Unknown

Map 8: Significant plant species recorded within 20 km of the survey area (Priority 3 and Priority 4).

3 METHODOLOGY

3.1 FIELD SURVEY TIMING

The targeted flora assessment of the survey area was conducted by four *ecologia* botanists over five separate field surveys in 2023, totalling 25 days: 28 August – 1 September; 4 – 8 September; 23 – 27 October; 20 -24 November; and 27 October – 1 December.

3.2 TARGETED FLORA SURVEY

Targeted searches for conservation significant plant species, Weeds of National Significance, and Declared Pests were conducted along systematic transects within the survey area. Transect were walked at approximately 20 m spacings, but 10 m infill spacings were done in some cases to record additional plants within detected populations. Approximately 673.81 ha of the Huntly mine area was surveyed in 2023 (Map 9). Specimens of all species that resembled potential significant species were collected for confirmation.

When significant or potentially significant species were observed the following information was recorded:

- GPS location.
- Number of plants (count, for individual or localised plants) or estimated number of plants for more extensive populations.
- Reproductive state.
- Reference collection and photograph of representative specimens.

3.3 SPECIMEN IDENTIFICATION

Specimen identification was undertaken by Dr Andrew Craigie with reference to current taxonomic literature and reference specimens. Scientific names used in this report follow the species concepts currently adopted by the Western Australian Herbarium.

3.4 STUDY TEAM AND LICENCES

The personnel undertaking this assessment and project roles are listed in Table 9.

3.5 LIMITATIONS AND CONSTRAINTS

An assessment of survey-specific issues and limitations is shown in Table 10.

Table 9: Project staff and licences.

Table 10: Flora and vegetation survey limitations.

Aspect	Assessment	Constraint
Availability of contextual information at a regional and local scale	Vegetation, land system, soil, and geology mapping, and significant species records, were available for the survey area. This information was adequate to provide appropriate contextual information for the survey.	Nil
Competency/experience of the team carrying out the survey, including experience in the bioregion surveyed	Key personnel leading the field survey and undertaking specimen identification have extensive experience undertaking flora surveys in the South-West, including in the Jarrah Forest bioregion.	Nil
Proportion of flora recorded and/or collected, any identification issues	Representative specimens of all significant species and potentially significant species recorded in the field were collected for confirmation. There were no identification issues.	Nil
Was the appropriate area fully surveyed (effort and extent)	The survey area was sufficiently surveyed.	Nil
Access restrictions within the survey area	Although fires prevented access to parts of the survey area in 2023, the project is ongoing, and these areas will be surveyed in 2024.	Nil
Survey timing, rainfall, season of survey	The survey was undertaken primarily in spring 2023 (late August to early December), during the primary survey season for botanical surveys in the South-West botanical province. Conditions were dryer than average (mean winter rainfall for 2023 was approximately 35% lower than average), although rainfall in July, just prior to the first survey, was close to average. Lower winter rainfall may reduce the prevalence of ephemeral species, including perennial geophytes. However, there are no geophytic perennials (including orchids) considered likely to occur in the survey area, and of the two annual herbs considered 'likely' to occur within the survey area, <i>Senecio leucoglossus</i> was recorded at numerous locations and was often flowering. Consequently, the dryer than average conditions is not considered to be a significant limitation.	Nil
Disturbance that may have affected the results of survey such as fire, flood or clearing	No parts of the surveyed area were significantly disturbed or affected by recent fires.	Nil

4 RESULTS AND DISCUSSION

4.1 SIGNIFICANT SPECIES

Three DBCA listed Priority species were recorded within the survey area: *Tetratheca phoenix* (P2), *Senecio leucoglossus* (P4), and *Stylidium ireneae* (P4) (Table 11, Figure 2, Map 9).

Tetratheca phoenix (Elaeocarpaceae) (P2) was recorded from a localised area immediately east of Solus Road on mid-slopes and foot-slopes in brown sandy loam with laterite (Map 9). Approximately 151 individuals were recorded within the survey area, primarily from vegetation unit PW (Open Forest of *Allocasuarina fraseriana* – *Eucalyptus marginata* - *Corymbia calophylla* with scattered understorey, including *Grevillea wilsonii*, *Adenanthos barbiger*, *Babingtonia camphorosmae* and *Hypocalymma angustifolium* on sandy gravels) and within the Dwellingup subsystem (Table 11). *Tetratheca phoenix* has been recorded close to the survey area previously (Map 7) and it is likely to occur more widely outside the survey area in similar suitable habitat.

Senecio leucoglossus (Asteraceae) (P4) was recorded sporadically across the survey area, primarily on lateritic slopes, within six vegetation units of Mattiske (2022) (mostly *Eucalyptus marginata* and *Corymbia calophylla* forest/woodland), and primarily within the Dwellingup subsystem (Table 11). Individual plants were usually isolated, occurring as solitary or few plants at each location; twenty-nine individuals were recorded within the survey area. *Senecio leucoglossus* has been recorded close to the survey area previously (the previous closest records are ca. 6 km from the survey area), and it is likely to occur more widely outside the survey area in similar suitable habitat.

Stylidium ireneae (Stylidiaceae) (P4) was recorded from a single location within the survey area from a sandy loam bank of a small stream (approx. 10 individuals) (Map 9). A second group of approximately 20 plants was recorded opportunistically outside of the survey area. There are numerous records of this species just to the west of the survey area and is likely to occur more frequently outside of the survey area along creeks. This habitat is not common within the survey area.

The likelihood of occurrence of the remaining species identified during the desktop assessment was reassessed for the surveyed areas based on survey effort, the presence of suitable habitat, and vegetation condition (Appendix A). Seasonal conditions were suitable for detecting annual and ephemeral species, vegetation was mostly in 'Excellent' condition, and the areas surveyed had not been affected by recent fires. All areas were systematically surveyed at 20 m or 10 m intervals. Consequently, all species initially assessed with a 'High' or 'Moderate' likelihood of occurrence were reassessed as 'Low'.

Table 11: Summary of significant plant species recorded within the survey area and distribution within vegetation associations and land systems.

Name	Vegetation association (Mattiske 2022)								Total
	AC	CL	E	PS	PW	S	T	TS	
<i>Tetratheca phoenix</i> (P2)	-	-	17	20	114	-	-	-	151
<i>Senecio leucoglossus</i> (P4)	-	2	-	1	7	2	12	5	29
<i>Stylidium ireneae</i> (P4)	10	-	-	-	-	-	-	-	10
Name	Landform	Soil-landscape system				Total			
		Cooke subsystem	Dwellingup subsystem	Murray subsystem	Yarragil subsystem				
<i>Tetratheca phoenix</i> (P2)	Midslopes, footslopes	1	150	-	-	151			
<i>Senecio leucoglossus</i> (P4)	Slopes	4	18	3	4	29			
<i>Stylidium ireneae</i> (P4)	Creek banks	-	-	10	-	10			

4.2 INTRODUCED SPECIES

There were no Weeds of National Significance or Declared Pests recorded within the survey area.

4.3 ADDITIONAL AREAS – LIKELIHOOD OF OCCURRENCE ASSESSMENT

Spatial data for several additional areas were provided in February 2024 for a likelihood of occurrence assessment (Map 10). These areas are all immediately adjacent to areas that were surveyed in 2023. Many of these are of negligible size (<0.02 ha) and were therefore excluded from further assessment. Based on their proximity to significant species records from 2023 (within ca. 500 m), 18 areas that were individually greater than 0.02 ha potentially contain either *Senecio leucoglossus* or *Tetratheca phoenix* (Table 12). *Senecio leucoglossus* has already been recorded in one of these areas (E23_088). None of the areas are likely to support *Stylidium ireneae*, which is typically restricted to the banks of creeks.

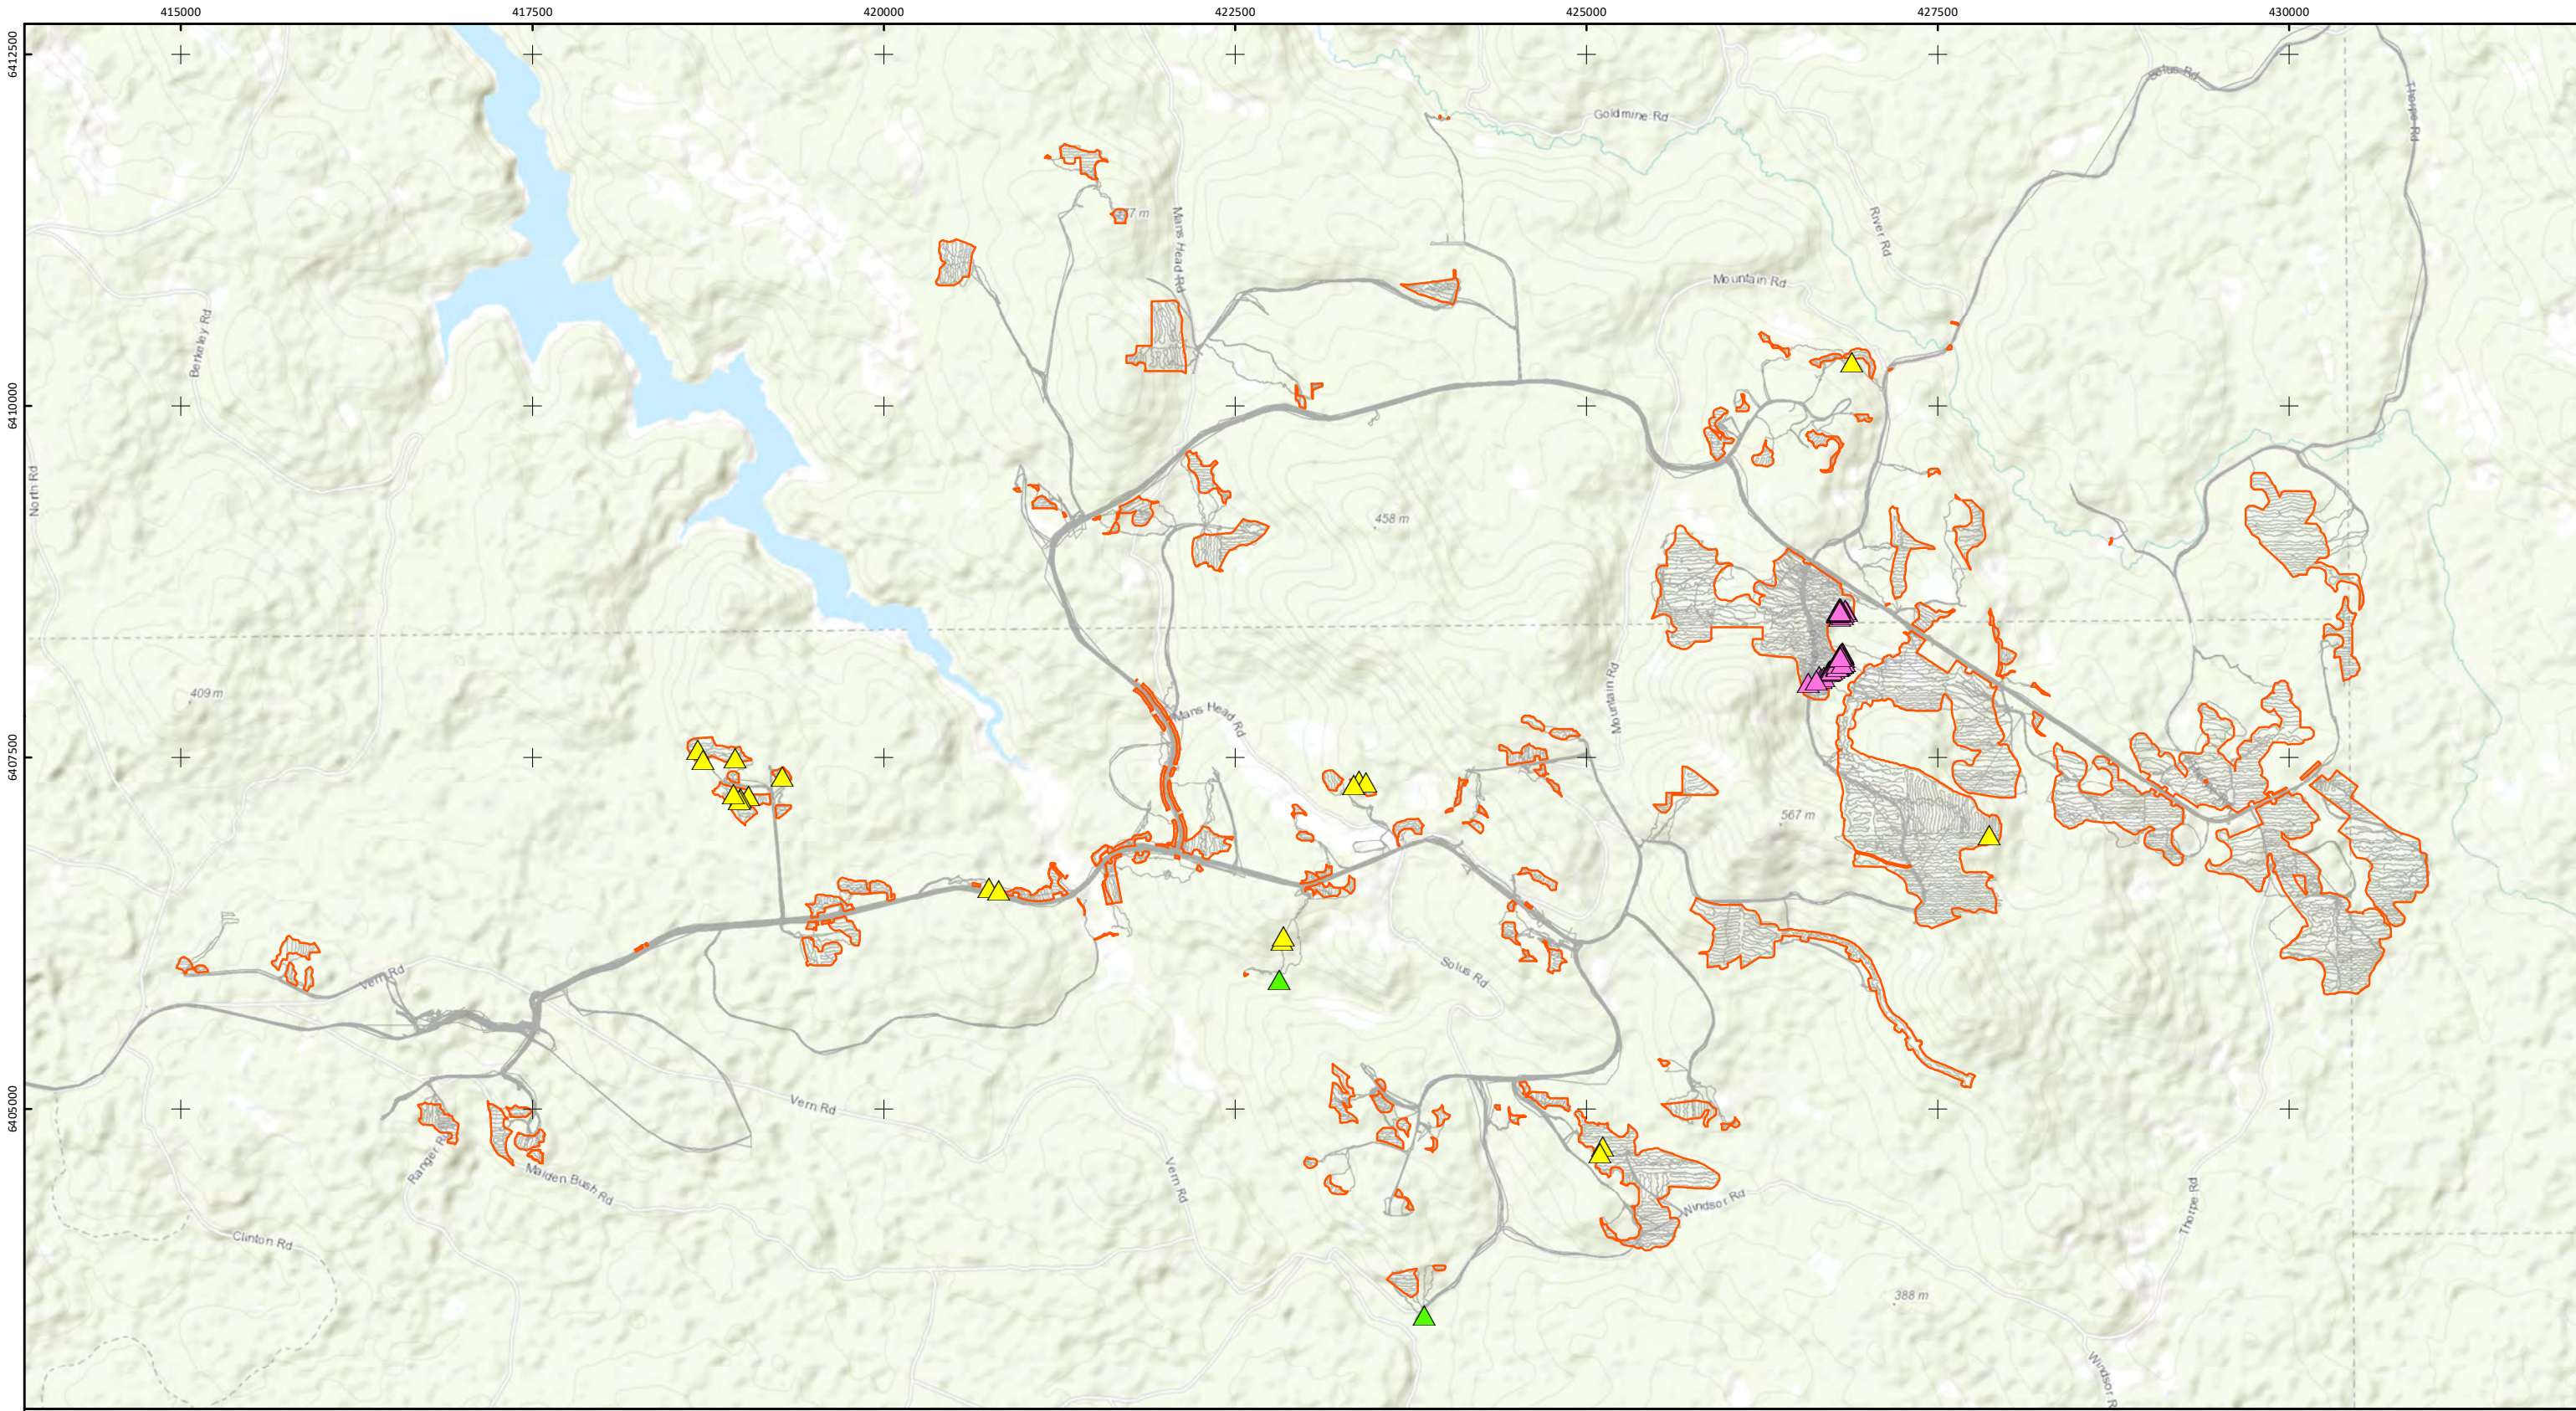

Table 12: Likelihood of occurrence assessment for additional survey areas.

Asset name	Likelihood of occurrence	Area (ha)
B23_176a	<i>Senecio leucoglossus</i> - moderate	0.02
B23_176b	<i>Senecio leucoglossus</i> - moderate	0.02

E23_016	<i>Senecio leucoglossus</i> - moderate	0.74
E23_088	<i>Senecio leucoglossus</i> - moderate	0.98
E23_074	<i>Tetratheca phoenix</i> - moderate	0.43

Figure 2: Photographs of significant species recorded within the survey area.

Top left, *Tetrathea phoenix* (P2); top right, *Senecio leucoglossus* (P4); bottom left, *Stylidium ireneae* (P4).

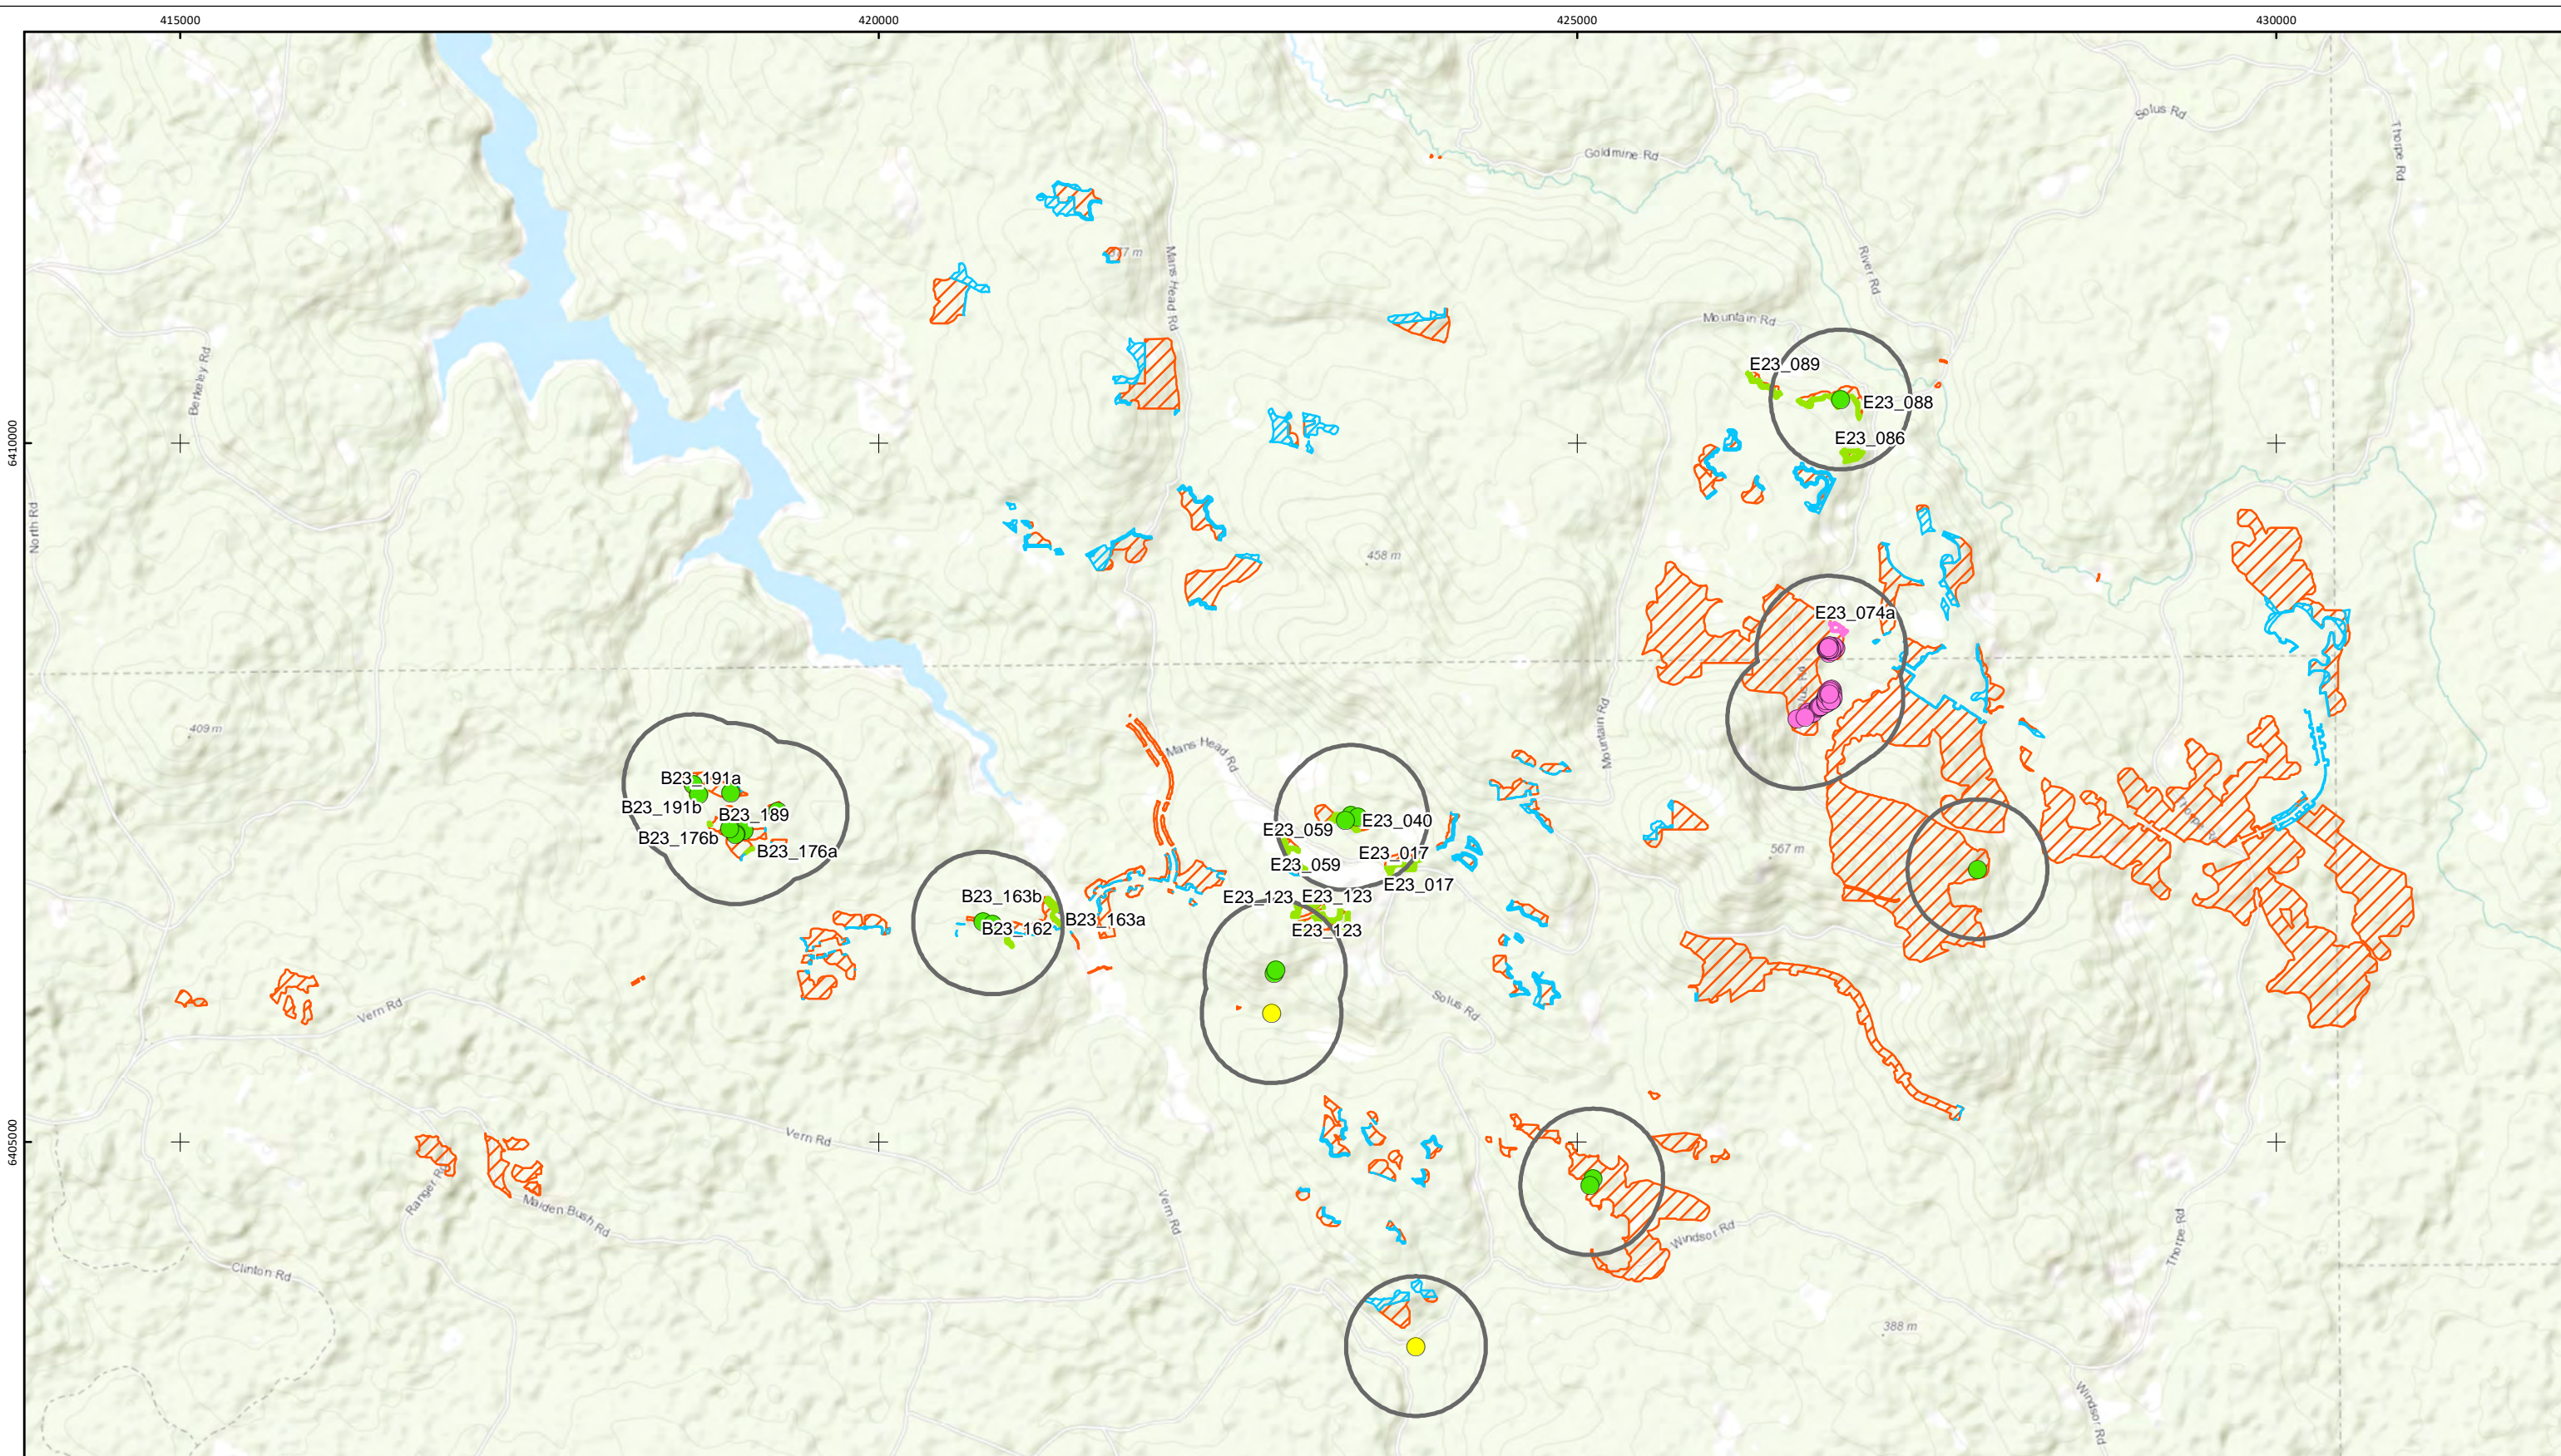

— Targeted survey GPS track log
 □ Survey area

Species
 ▲ *Senecio leucoglossus* (P4)
 ▲ *Stylium irenae* (P4)
 ▲ *Tetratheca phoenix* (P2)

Map 9: Locations of significant plant species recorded within the survey area.

Survey area

Significant species

Senecio leucoglossus
 Stylidium irenae
 Tetratheca phoenix
 Significant species 500 m buffer

Additional areas - likelihood of significant species occurrence

Low
 Senecio leucoglossus - moderate
 Tetratheca phoenix - moderate

Map 10: Additional areas - likelihood of occurrence assessment.

6 APPENDICES

Appendix A Likelihood of Occurrence Assessment.

Taxon	WA status	Habitat	Approximate flowering period	Growth form	Records in close vicinity of survey area (5 km)	Desktop assessment	Desktop likelihood of occurrence	Post-survey likelihood of occurrence ¹
<i>Acacia drummondii</i> subsp. <i>affinis</i>	P3	Lateritic gravelly soils.	-----JA---	Perennial shrub	YES	Suitable habitat possibly present.	HIGH	LOW
<i>Acacia oncinophylla</i> subsp. <i>patulifolia</i>	P4	Granitic soils, occasionally on laterite.	-----ASOND	Perennial shrub	YES	Suitable habitat possibly present.	HIGH	LOW
<i>Cyanothamnus tenuis</i>	P4	Gritty brown sandy clay over granite. Creeks, slopes.	-----ASON-	Perennial shrub	YES	Suitable habitat possibly present.	HIGH	LOW
<i>Grevillea pimeleoides</i>	P4	Gravelly soils over granite. Valleys, hillsides.	----MJASON-	Perennial shrub	YES	Suitable habitat possibly present.	HIGH	LOW
<i>Hemigenia platyphylla</i>	P4	Sandy & loamy soils. Slopes.	-----SON-	Perennial shrub	YES	Suitable habitat possibly present.	HIGH	LOW
<i>Hibbertia hortiorum</i>	P1	Jarrah-marri forests over laterite.	-----SO--	Perennial shrub	YES	Suitable habitat possibly present.	HIGH	LOW
<i>Lasiopetalum pterocarpum</i>	T	On sloping banks near creeks.	-----ASOND	Perennial shrub	YES	Suitable habitat possibly present.	HIGH	LOW
<i>Morelotia australiensis</i>	T	Flat. Light brown sand clay loam.	-----D	Perennial herb	YES	Suitable habitat possibly present.	HIGH	LOW
<i>Pimelea rara</i>	P4	Lateritic soils.	J-----D	Perennial shrub	YES	Suitable habitat possibly present.	HIGH	LOW
<i>Senecio leucoglossus</i>	P4	Gravelly lateritic or granitic soils. Granite slopes.	-----ASOND	Annual herb	YES	Suitable habitat possibly present.	HIGH	RECORDED
<i>Stylidium ireneae</i>	P4	Sandy loam. Valleys near creeks.	-----OND	Perennial herb	YES	Suitable habitat possibly present.	HIGH	RECORDED
<i>Tetradlea phoenix</i>	P2	Brown gravelly loam over granite. Mid-upper slopes.	-----SOND	Perennial shrub	YES	Suitable habitat possibly present.	HIGH	RECORDED
<i>Acacia horridula</i>	P3	Gravelly soils over granite, sand. Rocky hillsides.	----MJJA---	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Bossiaea modesta</i>	P2	Soils derived from granite. Damp areas close to streams.	-----OND	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Calothamnus graniticus</i> subsp. <i>leptophyllus</i>	P4	Clay over granite, lateritic soils. Hillsides.	----JJA---	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Chorizema ulotropsis</i>	P4	White sand with gravel, laterite, granite. Outcrops, winter damp to dry areas, flats.	-----JAS---	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Gastrolobium</i> sp. <i>Asperum</i> (F. Hort 2864)	P3	Slope, flat. Dry, brown loam, gravel over laterite.	-----S---	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Grevillea dissectifolia</i>	P3	Sand/loam and laterite along creeks and road verges.	----J--S-N-	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Grevillea flexuosa</i>	T	Red-brown sand with laterite & gravel, sand over granite. Ridgetops, breakaways.	-----JASO--	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Halgania corymbosa</i>	P3	Gravelly soils, soils over granite.	-----ASON-	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Lasiopetalum bracteatum</i>	P4	Sandy clay, clay, lateritic gravel. Along drainage lines, creeks, gullies, granite outcrops.	J-----ASOND	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Millotia tenuifolia</i> var. <i>laevis</i>	P2	Granite or laterite soils.	-----SO--	Annual herb		Suitable habitat possibly present.	MODERATE	LOW
<i>Petrophile filifolia</i> subsp. <i>laxa</i>	P3	Winter-wet sites, flats, slopes, swamps, drainage lines.	J-----ND	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Stackhousia</i> sp. Red-blotched corolla (A. Markey 911)	P3	Light grey gritty clay, with surface granitic cobbles, on a gentle southern upper slope.	----JJAS---	Perennial herb		Suitable habitat possibly present.	MODERATE	LOW
<i>Stylidium marradongense</i>	P3	Sand over laterite. Jarrah-Marri forest.	-----SON-	Perennial herb		Suitable habitat possibly present.	MODERATE	LOW
<i>Synaphea pandurata</i>	P3	Yellowish sands and sandy loams, dark brown loam, laterite gravel, granite.	-----SOND	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Tetradlea similis</i>	P3	Sandy clay with lateritic boulders.	-----AS---	Perennial shrub		Suitable habitat possibly present.	MODERATE	LOW
<i>Thysanotus anceps</i>	P3	White or grey sand, lateritic gravel, laterite.	-----OND	Perennial herb		Suitable habitat possibly present.	MODERATE	LOW
<i>Thysanotus formosus</i>	P1	Clayey sand, sandy loam.	J-----ND	Perennial herb		Suitable habitat possibly present.	MODERATE	LOW
<i>Acacia cuneifolia</i>	P4	Sand, clay or loam over granite. Granite outcrops.	-----JASO--	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Acacia oncinophylla</i> subsp. <i>ocnophylla</i>	P3	Fringing granite outcrops.	-----ASO--	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Andersonia</i> sp. <i>Audax</i> (F. Hort, B. Hort ...)	P3	Granitic heath. Granite outcrops.	J-----OND	Perennial shrub	YES	Suitable habitat unlikely to be present.	LOW	LOW
<i>Andersonia</i> sp. <i>Saxatilis</i> (F. & J. Hort 3324)	T	Granitic heath. Granite outcrops.	-----SO--	Perennial shrub	YES	Suitable habitat unlikely to be present.	LOW	LOW
<i>Anthocercis gracilis</i>	T	Sandy or loamy soils. Granite outcrops.	-----SO--	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Banksia recurvistylis</i>	P2	Granite outcrops.	-----N-	Perennial shrub	YES	Suitable habitat unlikely to be present.	LOW	LOW
<i>Boronia capitata</i> subsp. <i>gracilis</i>	P3	White/grey or black sand. Winter-wet swamps, hillslopes.	----JJASON-	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Byblis gigantea</i>	P3	Sandy-peat swamps.	J-----SOND	Perennial herb		Suitable habitat unlikely to be present.	LOW	LOW
<i>Caladenia speciosa</i>	P4	White, grey or black sand. Sandplains.	-----SO--	Perennial herb		Suitable habitat unlikely to be present.	LOW	LOW
<i>Cyathochaeta teretifolia</i>	P3	Grey sand, sandy clay. Swamps, creeks.	UNKNOWN	Perennial herb	YES	Suitable habitat unlikely to be present.	LOW	LOW
<i>Darwinia hortiorum</i>	P1	Brown loam/clay/gravel laterite. Granite outcrops.	-----ASON-	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Darwinia</i> sp. <i>Dryandra</i> (G.J. Keighery 9295)	P4	Lateritic outcrops.	----M-J---N-	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Darwinia thymoides</i> subsp. <i>St Ronans</i>	P4	Sandy or gravelly clay-loam soils. Slopes and Flats. Granite outcrops.	J-----N-	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Dicrasyllis reticulata</i>	P3	Granite outcrops, heath.	-----SOND	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW

Taxon	WA status	Habitat	Approximate flowering period	Growth form	Records in close vicinity of survey area (5 km)	Desktop assessment	Desktop likelihood of occurrence	Post-survey likelihood of occurrence ¹
<i>Drosera occidentalis</i>	P4	White-yellow sand, clayey soils. Swamps, seasonally wet depressions and slopes.	J-----OND	Perennial herb	YES	Suitable habitat unlikely to be present.	LOW	LOW
<i>Eucalyptus exilis</i>	P4	Grey sand, gravelly loam. Lateritic ridges.	-----ASO--	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Grevillea ornithopoda</i>	P2	Riverbanks. Primarily Swan Coastal Plain.	-----SOND	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Grevillea thelemanniana</i>	T	Sand, sandy clay. Winter-wet low-lying flats.	----MJASON-	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Hakea oldfieldii</i>	P3	Red clay or sand over laterite. Seasonally wet flats.	-----ASO--	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Hibbertia acrotoma</i>	P1	Brown loam. Granite outcrops.	-----AS---	Perennial shrub		Suitable habitat unlikely to be present.	LOW	LOW
<i>Lasiopetalum glutinosum</i> subsp. <i>glutinosum</i>	P3	Granite outcrops and creeks.	-----SOND	Perennial shrub	YES	Suitable habitat unlikely to be present.	LOW	LOW
<i>Lepyrodia curvescens</i>	P2	Wetlands and swamps.	-----SON-	Perennial herb		Suitable habitat unlikely to be present.	LOW	LOW
<i>Lepyrodia heleocharoides</i>	P3	Moist peaty sand. Wetlands and swamps.	-----D	Perennial herb	YES	Suitable habitat unlikely to be present.	LOW	LOW
<i>Meionectes tenuifolia</i>	P3	Sand or clay. Wetlands and swamps.	-----SOND	Annual herb	YES	Suitable habitat unlikely to be present.	LOW	LOW
<i>Paracaleana gracilicordata</i>	P1	Moss mats on granite outcrops.	-----ON-	Perennial herb	YES	Suitable habitat unlikely to be present.	LOW	LOW
<i>Paracaleana granitica</i>	P1	Moss mats on granite outcrops.	-----OND	Perennial herb	YES	Suitable habitat unlikely to be present.	LOW	LOW
<i>Parsonsia diaphanophleba</i>	P4	Alluvial soils. Along rivers.	JF-AMJ--S---	Perennial climber		Suitable habitat unlikely to be present.	LOW	LOW
<i>Pithocarpa corymbulosa</i>	P3	Gravelly or sandy loam. Granite outcrops.	JFMA-----	Perennial herb		Suitable habitat unlikely to be present.	LOW	LOW
<i>Tripterococcus</i> sp. <i>Brachylobus</i> (A.S. George 14234)	P4	Grey, black, or peaty sand. Winter-wet flats.	-----ON-	Perennial herb		Suitable habitat unlikely to be present.	LOW	LOW

¹Post-survey likelihood of occurrence rating is for surveyed areas only.
